For the customers in the U.S.A.
This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

You are cautioned that any changes or modifications not expressly approved in this manual could void your authority to operate this equipment.

All interface cables used to connect peripherals must be shielded in order to comply with the limits for a digital device pursuant to Subpart B of Part 15 of FCC Rules.

For the customers in Europe
This product with the CE marking complies with both the EMC Directive and the Low Voltage Directive issued by the Commission of the European Community. Compliance with these directives implies conformity to the following European standards:
- EN60065 : Product Safety (AC adaptor)
- EN55103-1 : Electromagnetic Interference (Emission)
- EN55103-2 : Electromagnetic Susceptibility (Immunity)
This product is intended for use in the following Electromagnetic Environments:
E1 (residential), E2 (commercial and light industrial), E3 (urban outdoors), E4 (controlled EMC environment, ex. TV studio)

The manufacturer of this product is Sony Corporation, 1-7-1 Konan, Minato-ku, Tokyo, Japan.
The Authorized Representative for EMC and product safety is Sony Deutschland GmbH, Hedelfinger Strasse 61, 70327 Stuttgart, Germany. For any service or guarantee matters please refer to the addresses given in separate service or guarantee documents.

For the State of California, USA only
Perchlorate Material - special handling may apply, See www.dtsc.ca.gov/hazardouswaste/perchlorate
Perchlorate Material : Lithium battery contains perchlorate.

For the customers in the USA and Canada
RECYCLING LITHIUM-ION BATTERIES
Lithium-Ion batteries are recyclable. You can help preserve our environment by returning your used rechargeable batteries to the collection and recycling location nearest you.
For more information regarding recycling of rechargeable batteries, call toll free 1-800-822-8837, or visit http://www.rbrc.org/
Caution: Do not handle damaged or leaking Lithium-ion batteries.

For the customers in Taiwan only
廃電池請回收

Make sure you have following items supplied with your camcorder. The number in parentheses indicates the number of that item supplied.

**Overview**

**Package Configuration**

- **Lens hood with lens cap (1)**
  - It is attached to the camcorder at the factory.
  - If you attach an optional wide-conversion lens, remove the lens hood.

- **Large eyecup (1)**
  - It is attached to the camcorder at the factory.

- **Infrared Remote Commander (1)**
  - It is attached to the camcorder at the factory.

- **USB cable (1)**

- **AV connecting cable (1)**

- **Component video cable (1)**

- **BP-U30 battery pack (1)**

- **BC-U1 battery charger (1)**

- **Shoulder strap (1)**

- **Lithium battery (CR2032 for backup) (1)**
  - It is mounted in the camcorder at the factory.

- **Lithium battery (CR2025 for the IR Remote Commander) (1)**
  - It is mounted in the IR Remote Commander at the factory.

- **CD-ROM (1)**
  - XDCAM EX Clip Browsing Software, SxS Device Driver Software, Operating Instructions in PDF format are included.

- **Operating Instructions (This manual) (1)**
  - SxS Device Driver Software End-User License Agreement (1)
The PMW-EX1 is a highly compact and high-performance XDCAM EX camcorder that uses SxS memory cards, as its recording medium. The imaging devices used in the PMW-EX1 camcorder are three 1/2-inch type CMOS sensors, each with an effective pixel count of 1920 × 1080, which produce images in full HD resolution.

New nonlinear recording media
Using SxS memory cards, the PMW-EX1 offers nonlinear capabilities such as instant random access and file-based operation.

HD recording using the “MPEG-2 Long GOP” codec
The PMW-EX1 records 1920 × 1080 HD images using “MPEG-2 Long GOP” codec compression. This mature “MPEG-2 Long GOP” codec, which is also adopted in the XDCAM HD and HDV 1080i series of products, enables you to record stunning-quality HD video and audio with long recording time by efficiently compressing the data.

Selectable bit rates
The PMW-EX1 offers a choice of bit rates: either 35 Mbps (HQ mode) or 25 Mbps (SP mode), depending on the desired picture quality and recording time.

Long recording time
By utilizing an efficient compression format, the PMW-EX1 records high-quality HD images for long recording time of approx. 50 minutes in HQ mode (35 Mbps VBR) or approx. 70 minutes in SP mode (25 Mbps CBR) on a single 16-GB SxS memory card. Equipped with two SxS memory card slots, the PMW-EX1 makes transition seamless without any frame loss, when recording is done across two cards.

Multiple-format recording
The PMW-EX1 camcorder offers a wide array of recording formats for multiple content creation applications. The scanning mode is switchable among 1920 × 1080, 1280 × 720, and 1440 × 1080 resolutions. Frame rate is also selectable from interlace and progressive (59.94i, 50i, 29.97P, 25P, and native 23.98P). In addition, 59.94P and 50P progressive recording is available in 1280 × 720 mode. SxS memory cards can simultaneously hold multiple files of any of these recording formats, allowing for flexible use of the memory cards.

High-quality uncompressed audio recording
In addition to HD video recording, the PMW-EX1 can record and play back high-quality, two-channel 16-bit, 48-kHz linear PCM uncompressed audio.

IT friendly
The file-based recording in MP4 format allows material to be handled with great flexibility in an IT-based environment, easily available for copying, transferring, sharing, and archiving.

For immediate recording start
In recording on flash memory cards, the XDCAM EX system makes each new recording on an empty area of the card. This is extremely convenient, as the camera operator need not worry about accidentally recording over good takes or search through footage for the correct position to start the next recording.

Instant-access thumbnail display with “Expand” function
Each time a recording is started and stopped on the XDCAM EX camcorder, the video and audio signals are recorded as one clip. Furthermore, thumbnails are automatically generated for each clip as a visual reference, allowing the operator to cue-up to a desired scene simply by guiding the cursor to a thumbnail. For further convenience, the ‘Expand’ function allows one selected clip in the Thumbnail display to be divided into 12 equal time intervals, each with its own thumbnail identifier. This is useful if you wish to quickly search for a particular scene within a lengthy clip.

Cutting-edge Camera Technologies

1/2-inch type three “Exmor” CMOS sensors
The PMW-EX1 is equipped with three newly developed 1/2-inch type “Exmor” CMOS Sensors, which deliver excellent picture performance with full HD resolution.
14x zoom lens
The PMW-EX1 is equipped with a zoom lens specifically designed for the camcorder to offer optimum picture performance. Independent rings for zoom, focus, and iris adjustment give the user a high level of operational comfort.

Versatile focus-assistance functions
The lens has a versatile functions for easy and precise focus adjustments.
- One-push Auto Focus
- MF Assist
- Expanded Focus
- Peaking
- Optical Image Stabilizer (Steady Shot)

Creative Recording Modes and Settings

23.98P native recording
The PMW-EX1 camcorder, a new member of Sony’s legendary CineAlta family, though compact offers native 23.98P recording capability.

Slow & Quick Motion function
The PMW-EX1 offers a Slow & Quick Motion function, commonly known as overcranking and undercranking in film shooting, which enables you to create unique ‘looks’ or special effects of slow- and fast-motion images.

Slow Shutter function
The PMW-EX1 offers a Slow Shutter function for capturing clear images in low-light environments. This allows the shutter speed to be changed to a maximum of 64-frame accumulation period.

Selectable gamma curves
The PMW-EX1 provides various types of gamma identical to those of other CineAlta camcorders.

Interval Recording function
The PMW-EX1 offers an Interval Recording function that intermittently records signals at predetermined intervals. This is convenient for shooting over long periods of time and also when creating pictures with special effects of extremely quick motion.

Frame Recording function
Frame Recording is a unique feature of the PMW-EX1 camcorder that is especially useful for clay-animation shooting. With this function, images for pre-determined frame are recorded each time the record button is pressed.

Shutter-angle settings
In addition to the electric shutter speed controls, the PMW-EX1 also has a “shutter angle” control, which is familiar to cinematographers.

Picture Profile feature
The Picture Profile feature allows the camera operator to easily call up customized picture-tonal settings to suit particular shooting conditions.

Shot Transition function
The Shot Transition function allows for smooth automatic scene transitions. The operator can program start and end settings for zoom, focus, and white balance into the A and B buttons, and with a press of the Start button a smooth transition will take place according to the set time.

A variety of functions and designs for high operability
- Depth-of-field indicator
- Brightness-level display
- Histogram indicator
- 3.5-inch color LCD monitor
- Easy-to-see color viewfinder
- Rotary grip
- Four assignable buttons
- Zoom and recording start/stop operations enabled both on the handle and the grip
- Long operating time with a battery pack
- Wide array of interfaces, including USB and i.LINK
- ATW (Auto Tracing White Balance)
- Built-in ND filter wheel
- Selectable gain
- High-speed picture search: ×4, ×15
- Freeze Mix function
- IR Remote Commander supplied

1) Sony, XDCAM, XDCAM EX, SxS, i.LINK, Exmor, CineAlta, and Remote Commander are trademarks of Sony Corporation.
2) HDV is a trademark of Sony Corporation and Victor Company of Japan, Limited.

All other trademarks are the property of their respective owners.
Using the CD-ROM

The supplied CD-ROM includes the following files:

**PMW-EX1 Operating Instructions**
The Operating Instructions for the PMW-EX1 (Japanese, English, French, German, Italian, Spanish and Chinese) are provided in PDF format.

**SxS Device Driver Software**
Driver for using SxS memory cards with a computer having an ExpressCard slot. Information on installation of the software is included in the ReadMe (Japanese, English, French, German, Italian, Spanish, and Chinese) in PDF format.

**XDCAM EX Clip Browsing Software**
Application program for operating clips recorded with XDCAM EX-series models on a computer. Information on installation and operations of the software is included in the User’s Guide (Japanese, English, French, German, Italian, Spanish, and Chinese) in PDF format.

Reading the CD-ROM Manuals

Preparations

The following program must be installed on your computer in order to read the operation manuals contained on the CD-ROM.

Adobe Reader Version 6.0 or higher

Memo

If Adobe Reader is not installed, you can download it from the following URL:

http://www.adobe.com/

Adobe and Adobe Reader are trademarks of Adobe Systems Incorporated in the United States and/or other countries.

To read the documents

Do the following:

1. Insert the CD-ROM in your CD-ROM drive.
A cover page appears automatically in your browser.
If it does not appear automatically in the browser, double-click on the index.htm file on the CD-ROM.

2 Select and click on the manual that you wish to read.
This opens the PDF file.

**Memo**
The files may not be displayed properly, depending on the version of Adobe Reader. In such a case, install the latest version you can download from the URL mentioned in “Preparations” above.

**Note**
If you have lost or damaged the CD-ROM, you can purchase a new one to replace it. Contact your Sony service representative.

## System Requirements for Using the Applications

The following operating conditions are recommended for using the software recorded on the CD-ROM:

### SxS Device Driver Software

**Applicable hardware**
Computer conforming to ExpressCard/34 or ExpressCard/54

**OS**
Microsoft Windows XP SP2 or later, Microsoft Windows Vista, or Mac OS X v10.4.9 or later

For support information on the driver, refer to the following URL:
http://www.sony.net/SxS-Support/

### XDCAM EX Clip Browsing Software

**OS**
Microsoft Windows XP SP2 or later (32-bit version), Microsoft Windows Vista (32-bit version), or Mac OS X v10.4.10

**CPU**
- **Windows**: Intel Pentium III 1GHz equivalent or higher (Intel PentiumD 3GHz equivalent or higher is recommended)
- **Macintosh**: Intel Core 2 Duo 2GHz or higher is recommended

**Memory**
- **Windows**: 512 MB or more (1 GB or more is recommended)
- **Macintosh**: 1 GB or more is recommended

- Microsoft, Windows, and Windows Vista are registered trademarks and/or trademarks of Microsoft Corporation in the United States and/or other countries.
- Intel Core and Pentium are trademarks of Intel Corporation in the United States and/or other countries.
- Macintosh and Mac OS are trademarks of Apple Inc. registered in the U.S States and other countries.

## Software Installation

Do the following to install the software on the CD-ROM on your computer:

1 **Insert the CD-ROM in your CD-ROM drive.**
   - A cover page appears automatically in your browser.
   - If it does not appear automatically in the browser, double-click on the index.htm file on the CD-ROM.

2 **Select and click on the software that you wish to install.**
   - The installer for the software starts up.
   - Follow the displayed instructions:
     *For details, refer to the User’s Guide or ReadMe of the software.*

### Uninstalling an application program

**Windows computer**
Choose “Start,” “Control Panel” then “Add or Remove Programs” and specify the program to be deleted.

**Macintosh computer**
Drop the folder of the software (default: /Application/XDCAM EX Clip Browser) into Trash.
Parts Identifications

Camcorder

1. External microphone holder (page 53)
2. Built-in microphone (page 53)
3. LCD (Liquid Crystal Display) monitor (page 24)
4. Lens hood
   If you attach an optional wide-conversion lens, remove the lens hood. (See the column at right.)
5. Lens cap open/close lever (page 33)
6. Rear tally lamp (page 34, page 121)
7. Battery pack receptacle (page 21)

For functions and usage, see the pages shown in parentheses.

To remove the lens hood
① Loosen the hood fixing screw, ② turn the hood in the direction of the arrow, ③ then pull it out.

To reattach the hood, align the marks on the hood with those on the camcorder, turn it in the opposite direction from that when you removed it, then tighten the fixing screw.
8. Viewfinder (page 25)
9. Eyecup (page 25)
10. Eyepiece focusing knob (page 25)
11. Headphone jack (stereo mini jack) (page 54, page 80)
12. i.LINK (HDV) connector (4-pin, S400 conforming to IEEE1394) (page 113)
13. Hooks for the shoulder strap (left and right)
   Attach the supplied shoulder strap as shown below.

14. Built-in speaker (page 54, page 80)
15. Grip (page 27)
16. BATTERY RELEASE button (page 21)
17. SDI OUT connector (BNC type) (page 109)
18. A/V OUT connector (audio/video multi output) (page 110)
19. COMPONENT OUT connector (Mini D) (page 109)
20. USB connector (Mini B) (page 110)
21. Accessory shoe
22. REC/TALLY lamp (page 34, page 121)
23. IR remote control receptor
24. AUDIO IN CH-1/CH-2 connectors (XLR) and input selection switches (page 53)
25. WHT BAL (automatic white balance adjustment) button (page 37)
26. SHUTTER switch (page 42)
27. ASSIGN 4 (assignable 4) button (page 56)

For functions and usage, see the pages shown in parentheses.

Note
The lens is properly adjusted at the factory. Do not touch the controls of the lens control block.
28. MONITOR VOL (volume) buttons (page 54, page 80)
29. THUMBNAIL button (page 78)
30. PLAY/PAUSE button (page 78)
31. F REV (fast reverse) button (page 79)
32. PREV (previous) button (page 79)
33. STOP button (page 80)
34. On-handle ZOOM button (page 45)
35. Zoom speed switch (page 45)
36. CANCEL button (page 94)
37. SEL/SET (selection/set) button (Joystick) (page 94)
   It functions accordingly when you move it up (toward the subject), down (toward the viewfinder), left, or right, or you push along the axis.
   It is called “the joystick” in the subsequent operating instructions.
38. F FWD (fast forward) button (page 79)
39. NEXT button (page 80)
40. REC START/STOP button (page 33)
41. REC HOLD lever (page 34)

---

42. SHOT TRANSITION operation block (page 63)
43. LCD B.LIGHT (LCD backlight) switch (page 24)
44. LCD B.LIGHT +/- (LCD backlight adjustment) buttons (page 24)
45. TC/U-BIT/DURATION (time data selection) button (page 52, page 79)
46. STATUS button (page 88)
47. DISPLAY/BATT INFO button (page 18)
48. BARS/CAM (color bar/camera signal switching) button (page 55)

---

49. Focus ring (page 47)
50. Zoom ring (page 45)
51. Iris ring (page 44)
52. IRIS switch (page 44)
53. MACRO switch (page 49)
54. FOCUS switch (page 48)
55. PUSH AF (momentary auto focus) button (page 48)

Side operation panel

56. ND filter select switch (page 36)
57. ASSIGN (assignable) 1/2/3 buttons (page 56)
58. PEAKING button (page 48)
59. FULL AUTO button and indicator (page 33)
60. ZEBRA button (page 40)
61. WHITE BAL (white balance memory) switch (page 37)
62. GAIN switch (page 41)

Card slot block

The SxS memory card slots and EJECT buttons are located behind the cover.

53. ACCESS lamps (page 30)
54. SLOT SELECT (SxS memory card select) button (page 31)
55. SxS memory card slots (page 30)
56. EJECT buttons (page 30)

Rear operation panel

63. MENU (menu display ON/OFF) button (page 94)
64. SEL/SET (selection/set) dial (Jog dial) (page 94)
   It functions accordingly when you turn it up or down, or you push it horizontally.
   It is called “the jog dial” in the subsequent operating instructions.
65. CANCEL button (page 94)
66. PICTURE PROFILE button (page 69)
67. Power (CAMERA/MEDIA) switch (page 23)
68. DC IN (DC power input) connector (page 22)
69. AUDIO LEVEL CH-1/CH-2 controls (page 53)
70. AUDIO SELECT (audio level control mode selection) switches (page 53)
71. AUDIO IN (audio input selection) switches (page 53)
Controls on the grip

76. REC START/STOP button (page 33)
77. RELEASE (grip release) button (page 27)
78. REC REVIEW button (page 56)
79. EXPANDED FOCUS button (page 47)
80. Servo zoom lever (page 45)
81. LENS REMOTE connector (page 46)

Bottom

82. ZOOM switch (page 45)
83. Tripod receptacle

Note
Check that the size of the hole matches the screw of the tripod. If they do not match, the camcorder cannot be attached to the tripod securely.

84. Backup battery holder (page 118)

IR Remote Commander (Supplied)

The buttons without remarks can be used in the same manner as the corresponding buttons on the camcorder.

1. ZOOM T/W (telephoto/wide-angle) button
2. SHOTMARK 1 and 2 buttons (page 55, page 86)
3. THUMBNAIL button
4. PREV (previous clip jump) button
5. F REV (fast reverse) button
6. PLAY/PAUSE button
7. REC (record) buttons
   Press the button together with the unmarked button (safety button) to start recording.
8. REC PAUSE buttons
   Press the button together with the unmarked button (safety button) to pause recording.
9. PUSH SET button (four-way arrow key)
   It functions the same as the SEL/SET button (joystick) on the camcorder.
10. NEXT button
11. STOP button
12. F FWD (fast forward) button
13. PUSH AF button

Note
The SUB CLIP button does not function with this camcorder.

When you use the remote commander, see “Using the IR Remote Commander” on page 27.
On-Screen Indications

Indications in Camera Mode

When this unit is in Camera mode (mode for recording), pressing the DISPLAY/BATT INFO button displays the statuses and settings of this unit on the LCD monitor/viewfinder screen. When you press the DISPLAY/BATT INFO button again, these indications are canceled.

Remarks

[M]: The indication of the items named with this suffix can be independently turned on/off with “Display On/Off” of the LCD/VF SET menu (see page 104).

[A]: The indication of items named with this suffix can be turned on/off using the assignable buttons to which the corresponding on/off functions have been assigned (see page 56).

[D]: The settings of the items named with this suffix can be changed using the Direct menu on the screen (see page 19).

1. Battery remaining/DC IN voltage indication [M] (page 21)
2. i.LINK status indication [M] (synchronized with 3 and 4)
   Only when an external device is connected to the i.LINK connector, the status (REC or STBY) of the device is displayed.
3. Special recording/operation status indication [M] (synchronized with 2 and 4)
   - REC: Recording in progress
   - STBY: Standby for recording
   - S&Q REC: Slow & Quick Motion recording in progress
4. Media status indication [M] (synchronized with 2 and 3)
   - A: Memory card in slot A is active.
   - B: Memory card in slot B is active.
5. Time data indication M (page 52)
6. Media remaining indication M (page 32)
7. Zoom position indication M (page 45)
8. TLCS mode indication M [D] (page 100)
9. Steady Shot indication M [D] (page 50)
10. Focus mode indication M (D only in MF mode) (page 47)
11. White balance mode and color temperature indications M [D] (page 37)
12. Picture profile indication M [D] (page 69)
13. ND filter indication M (page 36)
14. Iris position indication M [D] (page 44)
15. Gain indication M [D] (page 41)
16. Shutter mode/shutter speed indication M [D] (page 42)
17. Audio level meters M (page 54)
18. Histogram indication M A
19. Fader indication M (page 67)
20. Video level cautioning indication M
   If the video level is too high or too low, a caution is generated showing the appropriate ND filter number.
21. Depth-of-Field indication M A
22. Brightness level indication M A
23. Special recording mode indication M (D only in Slow & Quick Motion Standby)
   - Frame Rec: Frame Rec mode
   - Interval Rec: Interval Rec mode
   - S&Q Motion: Slow & Quick Motion mode
24. Video Format indication M (page 35)

Direct Menu Operation

The settings of the items named with a suffix D can be changed using the Direct menu on the screen.
Select “All,” “Part,” or “Off” for Direct Menu using “Direct Menu” (page 107) of the OTHERS menu.

When the Direct mode is set to “Part,” the operation is limited depending on the GAIN, SHUTTER, or WHITE BAL switch setting. When the Direct mode is set to “All,” the GAIN, SHUTTER, and WHITE BAL switches are disabled.

**Note**
When the indicator of the FULL AUTO button is lit, the Direct Menu operation is disabled for the functions that are forcibly set to the automatic mode in Full Auto mode (page 33).

To operate the Direct menu

Use the joystick on the handle or the jog dial on the rear control panel.

1. Press the joystick or the jog dial.
   If “Direct Menu” is set to “All” or “Part,” the cursor is displayed on one of the items for which the Direct menu operation is permitted.

   **Example:** TLCS mode indication

2. Tilt the joystick or rotate the jog dial to set the cursor to the item to be operated then press the joystick or the jog dial.
The Direct menu of the selected items appears.

**Example:**
Direct menu for TLCS mode selection

3 Tilt the joystick or rotate the jog dial to select the setting then press the joystick or the jog dial.

The menu disappears, and the new setting is displayed.
Preparations

Power Supply

You can use a battery pack or AC power via an AC adaptor.
If you connect an AC power source, it has a priority even if a battery pack is mounted.

Using a Battery Pack

Mount a BP-U30 or BP-U60 Lithium-ion battery pack.
One BP-U30 is supplied with this camcorder.

Notes

- Before use, charge the battery pack with the supplied BC-U1 Battery Charger.
- A warm battery pack immediately after use may not be able to be fully recharged.

Mounting the battery pack

Fully insert the battery pack then slide it to the left to lock.

Removing the battery pack

Hold the BATTERY RELEASE button pressed, slide the battery pack to the right to unlock, then pull it out.

Checking battery charge remaining

To check during operation

When recording or playback is in progress on the battery pack, an icon to show the current battery charge level and usage time remaining are displayed on the LCD monitor/EVF screen.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Remaining</th>
</tr>
</thead>
<tbody>
<tr>
<td>🍁🍁🍁🍁</td>
<td>100% to 91%</td>
</tr>
<tr>
<td>🍁🍁🍁</td>
<td>90% to 71%</td>
</tr>
<tr>
<td>🍁🍁</td>
<td>70% to 51%</td>
</tr>
<tr>
<td>🍁</td>
<td>50% to 31%</td>
</tr>
<tr>
<td>🍁</td>
<td>30% to 11%</td>
</tr>
<tr>
<td>🍁</td>
<td>10% to 0%</td>
</tr>
</tbody>
</table>

The camcorder indicates the remaining usage time in minutes by calculating the available time with the battery pack if operation is continued at the current rate of power consumption.
The operating time on a battery pack depends on the condition (new or old) of the battery pack and the ambient temperature.

**To check in power-off status**
Information on the mounted battery pack (BATTERY INFO) is displayed on the LCD monitor screen when you hold the DISPLAY/BATT INFO button pressed even if the camcorder is off. The BATTERY INFO display goes off after 5 seconds.

**To change the message levels**
The Low BATT level is set to 10% of full charge, and the BATT Empty level is set to 3% of full charge at the factory. These settings can be changed with “Battery Alarm” (page 107) of the OTHERS menu.

**Using AC Power (DC IN Power)**
You can connect an AC power source to this camcorder by using the supplied BC-U1 Battery Charger for BP-U30/U60 as an AC adaptor, as shown below:

1. Connect the DC power output cable of the BC-U1 to the DC IN connector of the camcorder.
2. Connect the power cord supplied with the BC-U1 to the AC input connector of the BC-U1 then to an AC power source.
3. Set the mode switch of the BC-U1 to the DC OUT position.

*For details, refer to the Operating Instructions of the BC-U1.*

When recording or playback is in progress on power from the DC IN connector, the input voltage is displayed on the LCD monitor/viewfinder screen.
**Note**

The battery pack mounted on the camcorder is not charged even if you set the mode switch of the BC-U1 to the CHARGE position. To charge the battery pack, remove it from the camcorder and mount it on the BC-U1.

**Turning Power On**

This camcorder has Camera mode for recording and Media mode for playback.

The mode is selected when you turn the power on.

To operate in Camera mode, turn the power on by setting the power switch to the CAMERA position.

To operate in Media mode, turn the power on by setting the power switch to the MEDIA position.

**Turning Power Off**

Set the power switch to the OFF position.

**Note**

When removing the battery pack or the DC IN power, be sure to set the switch to OFF in advance.

Removing the battery pack and the DC IN power without first setting the power switch to OFF may cause damage to the camcorder or SxS memory cards.

---

**Setting the Clock**

When you turn the camcorder on for the first time after purchasing or replacing the backup battery (page 118), the Initial Setting display appears on the LCD monitor/viewfinder screen.

Set the date and time of the built-in clock, using this display.

**Time Zone**

The value shows the time difference from UTC (Coordinated Universal Time).

Change the setting if needed.

**Setting the time and date**

Use the joystick on the handle or jog dial on the rear operation panel for setting.

1. Tilt the joystick or turn the jog dial to set the cursor to “Date/Time” then press the joystick or dial.

The cursor moves to the year-setting column.
2 Tilt the joystick or turn the jog dial to set the year then press the joystick or dial.
   The cursor moves to the month-setting column.

3 Set the month, day, hour, minute, and second in sequence in the same manner.
   When you press the joystick or jog dial at “SET,” the cursor moves back to “Date/Time.”

4 Move the cursor to “Finish” then press the joystick or dial.

The Initial Setting display disappears, and the clock setting is completed.
The camcorder enters the operation mode (Camera mode or Media mode) you selected with the power switch.

Once after the Initial Setting display disappears, the time zone and date/time settings can be changed using “Time Zone” (page 105) and “Clock Set” (page 106) of the OTHERS menu.

Notes
- If the clock setting is cleared because of exhaustion of the backup battery while no operation power was being supplied (no battery pack and no DC IN connection), the Initial Setting display will be displayed when you turn the camcorder on at the next opportunity.
- While the Initial Setting display is shown, no other operation except turning the power off is permitted until you finish the setting for this display.

---

You can adjust the angle and the display conditions of the LCD monitor for the best view in various shooting situations. These adjustments of the LCD monitor have no effect on pictures being recorded.

Turning on/off the LCD monitor

The LCD monitor turns on when it is opened and turns off when it is returned to the park position. To open, pull the monitor out horizontally from the park position to rotate it 90 degrees.

Adjusting the angle

Rotate the opened LCD monitor to the desired angle.

It can be rotated as much as 90 degrees in the direction facing the subject and as much as 180 degrees in the opposite direction. When you rotate it 90 degrees toward the subject, the image on the monitor becomes upside down, indicating the mirror image of the subject. The display direction of the textual information is converted to the readable direction.
Adjusting the backlight

Turning the backlight on/off
The backlight may not be necessary for viewing images on the LCD monitor under bright ambient light, such as in an outdoor location. Set the LCD B.LIGHT switch to OFF to turn off the backlight.

Adjusting the brightness of the backlight
When you set the LCD B.LIGHT switch to ON, you can adjust the brightness of the backlight, using the LCD B.LIGHT + and – buttons. Press the – button to darken the backlight. Press the + button to make it brighter. During adjustment, the backlight level bar appears to indicate the adjustment value.

Adjusting the color, contrast, and brightness
These adjustments can be made using the LCD/VF SET menu. Press the MENU button to set the camcorder to Menu mode and select [LCD/VF SET menu] then “LCD” from the menu. Set color, contrast and brightness of the LCD monitor with the corresponding LCD menu items: Color, Contrast, and Brightness.

For details on menu operations, see “Basic Menu Operations” on page 94.

Adjusting the Viewfinder

If the picture on the LCD monitor is hard to view under bright ambient light, you can use the viewfinder to check the picture. You can adjust the display conditions of the viewfinder according to your current lighting conditions. These adjustments of the viewfinder have no effect on pictures being recorded.

Caution
Do not leave the camcorder with the eyepiece of the viewfinder facing the sun. Direct sunlight can enter through the eyepiece, be focused in the viewfinder, and cause fire.

Hereafter the viewfinder is referred to as “EVF” (abbreviation of Electronic Viewfinder).

Turning the EVF on/off
With the factory setting, the EVF is turned on when the LCD monitor is in its park position or is rotated to face the subject. You can change the setting so that the EVF is always on regardless of the status of the LCD monitor, using “EVF” (page 103) of the LCD/VF SET menu. Change the “Power” setting from “Auto” to “On.”

Adjusting the focus in the viewfinder
The eyepiece focusing (diopter compensation) knob enables adjustment to match the eyesight of operator so that the operator can view the image clearly in the eyepiece.
Adjusting the LCD Monitor and Viewfinder

Preparations

Adjusting the backlight

The brightness of the backlight for the EVF can be switched between High and Low. Select “EVF” from the LCD/VF SET menu and set “Backlight.”

<table>

</tbody>
</table>

Switching between color and monochrome modes

For the EVF screen, color or monochrome display can be selected. Select “EVF” from the LCD/VF SET menu then select “Mode.” Select “B&W” if checking the subject and focusing are easier on the monochrome display. If you assign “EVF Mode” to one of the assignable buttons (see page 56), you can switch between color and monochrome by pressing the button.

Adjusting the contrast and brightness

Select “EVF” from the LCD/VF SET menu and adjust the contrast and brightness with the corresponding items: Contrast and Brightness.

For details on menu operations, see “Basic Menu Operations” on page 94.

Using the eyecup (supplied)

A large eyecup is attached to the EVF at the factory. It can be removed by pulling it out, if not necessary.

To reattach the eyecup, stretch it a little to attach to the EVF and fit the rim of the eyecup into the horizontal groove of the viewfinder.

Using the eyecup (supplied)
Adjusting the Grip

The grip rotates approx. 120 degrees to support a variety of shooting styles. Holding the RELEASE button pressed, slowly rotate the grip.

Click positions are provided at each 15 degrees. Release the RELEASE button at the desired click position to lock the grip.

Using the IR Remote Commander

Before use

Before you use the supplied IR Remote Commander for the first time, pull out the insulation sheet from the battery holder.

A CR2025 lithium battery is set in the holder at the factory.

To use the IR Remote Commander

For controlling the camcorder from the IR Remote Commander, activate the remote control function of the camcorder after turning the power on. Activating/deactivating the remote control function can be achieved using the Setup menu or an assignable button.

To activate using the menu

Press the MENU button to set the camcorder to Menu mode, select (the OTHERS menu) and set “IR Remote” to “On.”

For details on menu operations, see “Basic Menu Operations” on page 94.

To activate using an assignable button

Assigning “IR Remote” to one of the assignable buttons permits you to activate/deactivate the remote control function by pressing the button.

For the assignable buttons, see “Changing Functions of the Assignable Buttons” on page 56.
**Note**

To avoid malfunctions, the remote control function is automatically deactivated when the camcorder is turned off. Activate the function each time when required after you turn the camcorder on.

**Battery lifetime**

When the lithium battery’s power falls, the IR Remote Commander may not work even if you press the buttons. The average lithium battery’s service life is about one year, but this depends on the pattern of use.

If pressing the remote control buttons produces absolutely no effect on the camcorder, replace the battery then check the operation again.

**Replacing the battery in the IR Remote Commander**

Use a commercially available CR2025 lithium battery. Do not use any battery other than a CR2025.

1. **Hold down the lock lever ①, pull out the battery holder ②, and remove the battery.**

2. **Place a new battery in the battery holder with the + symbol facing upward ①, then push the battery holder into the IR Remote Commander until it clicks ②.**

**WARNING**

Battery may explode if mistreated. Do not recharge, disassemble, or dispose of in fire.

**CAUTION**

- Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer.
- Dispose of used batteries according to the manufacturer’s instructions.
Handling SxS Memory Cards

This camcorder records audio and video on SxS memory cards (optional) inserted in the card slots.

About SxS Memory Cards

Usable SxS memory cards

The following Sony-made SxS memory cards (SxS PRO) can be used with this camcorder:
- SBP-8 (8GB)
- SBP-16 (16GB)

SBP-8 and SBP-16 comply with the ExpressCard standard.

- SxS and SxS PRO are trademarks of Sony Corporation.
- The ExpressCard word mark and logo are owned by Personal Computer Memory Card International Association (PCMCIA) and are licensed to Sony Corporation. All other trademarks are the property of their respective owners.

Notes on using SxS memory cards

- Recorded data may be damaged or lost in the following situations:
  - If you remove this media or turn off the power while formatting, reading or writing data.
  - If you use this media in locations subject to static electricity or electrical noise.
- Do not use or store this media in the following locations:
  - Where recommended operating conditions are exceeded.
  - Inside a closed car in summer; or in strong sunshine / under direct sunlight / near a heater, etc.
  - Humid or corrosive location
- Verify the correct direction of insertion before use.
- When storing or carrying this media, put this media in the carrying case and lock it firmly.

- We recommend that you make a backup copy of important data. Sony accepts no responsibility for any damage or loss of data you recorded.
- Do not apply a label sheet in places other than the label space. When applying the label sheet to this media, do not allow it to protrude from its proper location.

For write protection

Setting the write-protect switch of the SxS memory card to “WP” disables you to record, edit or delete data.
Handling SxS Memory Cards

Preparations

Note

Do not operate the write-protect switch of an SxS memory card while it is set in the camcorder. Temporarily remove the card from the camcorder before changing the switch setting.

Inserting an SxS memory card

1 Slide the cover to the left to open.

2 Insert the SxS memory card into the slot.

The ACCESS lamp lights in red then changes to green once the memory card is ready for use.

3 Close the cover.

Status indications by the ACCESS lamps

Card slots A and B are accompanied by the respective ACCESS lamps to indicate their statuses.

<table>
<thead>
<tr>
<th>Lamp</th>
<th>Slot statuses</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lights in red</td>
<td>Accessing the loaded SxS memory card (writing/reading data)</td>
</tr>
<tr>
<td>Lights in green</td>
<td>Standby (ready for recording or playback using the loaded SxS memory card)</td>
</tr>
<tr>
<td>Off</td>
<td>• No SxS memory card is loaded.</td>
</tr>
<tr>
<td></td>
<td>• The loaded card is invalid.</td>
</tr>
<tr>
<td></td>
<td>• An SxS memory card is loaded, but another slot is active.</td>
</tr>
</tbody>
</table>

Removing an SxS memory card

1 Open the cover, once press the EJECT button to release the lock, then pull the button out.

Press and unlock the button.

2 Press the EJECT button again to remove the card.
Notes
- Data are not guaranteed if the power is turned off or a memory card is removed while the card is being accessed. All data on the card may be destroyed. Be sure that the ACCESS lamps are lit in green or off when you turn off the power or remove memory cards.
- When you turn the camcorder on by setting the power switch to MEDIA (Media mode), a display to show that an SxS memory card is being confirmed appears on the LCD monitor/EVF screen.

The display automatically changes to the thumbnail screen (page 77) when a valid memory card is inside, but it remains on the screen if no valid memory card is loaded.

Switching Between SxS Memory Cards
When SxS memory cards are loaded in both card slots A and B, press the SLOT SELECT button to select the card you wish to use.
If a card becomes full during recording, switching to the other card is automatically executed.

Note
The SLOT SELECT button is disabled while playback is in progress. Switching is not executed even if you press the button. The button is enabled on the thumbnail screen (page 77).

Formatting an SxS Memory Card
Formatting may be required before using an SxS memory card with this camcorder. For an SxS memory card that is not formatted or that was formatted with another system, a message to confirm if formatting is to be executed is displayed on the LCD monitor/EVF screen.

Note on formatting
Any SxS memory card formatted with a device other than this camcorder cannot be used with the camcorder.

To execute formatting
If the message for formatting is displayed, turn the jog dial or tilt the joystick to select “Execute” then press the dial or joystick.
Formatting begins.
The in-progress message and status bar (%) are displayed, and the ACCESS lamp lights in red. When formatting is completed, the completion message is displayed for three seconds.

Recording/playback during formatting
You can perform recording or playback using the SxS memory card in the other card slot while formatting is in progress.

If formatting fails
A write-protected SxS memory card or memory card that cannot be used with this camcorder will not be formatted.
As a warning message is displayed, replace the card with an appropriate SxS memory card, as per the instructions in the message.

To format by menu operation
When no formatting message is displayed on the LCD monitor/EVF screen, you can execute formatting using “Format Media” (page 108) of the OTHERS menu in the same manner.

Notes
- All the data, including recorded pictures and setup files, are erased when a memory card is formatted.
- SxS memory cards to be used with this camcorder must be formatted using the format function of this camcorder. Any card formatted with other device must be formatted again with this camcorder.
Checking the Remaining Time Available for Recording

In Camera mode, you can check the time remaining for the SxS memory cards loaded in the card slots on the LCD monitor/EVF screen.

The available time for recording with the current video format (recording bit rate) is calculated according to the remaining space of each card and displayed in time units of minutes. The remaining can also be checked in a meter format on the BATTERY/MEDIA status screen (page 91).

Note

A icon appears if the memory card is write-protected.

Replacing an SxS memory card

- If the available time on two cards in total becomes less than 5 minutes, a message “Media Near Full,” flashing of the tally lamps, and a beep sound will warn you. Replace the cards with those with sufficient space.
- If you continue recording until the total remaining time reaches zero, the message changes to “Media Full,” and recording stops.

Note

Approximately 600 clips can be recorded on one SxS memory card at maximum. If the number of recorded clips reaches the limit, the remaining time indication becomes “0,” and the message “Media Full” is displayed.

Restoring an SxS Memory Card

If an error occurs with data in a memory card for some reason, the card must be restored. If an SxS memory card that needs to be restored is loaded, a message that prompts you to execute a restore operation is displayed on the LCD monitor/EVF screen.

To restore a card

Select “Execute” by turning the jog dial or tilting the joystick then push the dial or joystick.

The restore operation begins. During restoration, the in-progress message and status bar (%) are displayed, and the ACCESS lamp is lit in red.

When restoration is completed, the completion message is displayed for three seconds.

If restoration fails

- A write-protected SxS memory card or one on which an error occurred cannot be restored. For such a card, a warning message is displayed. Release the write protection or replace the card, as per the instructions in the message.
- An SxS memory card on which an error occurred may become usable again through repeated formatting.
- In some cases, only parts of clips cannot be restored. Playback of the restored clips becomes possible again.

Recording/playback during restoration

You can perform recording or playback using the SxS memory card in the other card slot while restoration is in progress.
Basic recording can be performed with the following procedures:

**Preparations**

1. Mount a fully charged battery pack.
2. Load SxS memory card(s).
   - If you load two cards, recording is continued by automatically switching to the second card when the first card becomes full.
3. Pull up on the lens cap open/close lever to open the lens cap built in the lens hood.
4. Adjust the angle of the LCD monitor for the best view.
   - When you wish to use the EVF, fold the LCD monitor to its park position and adjust the angle of the EVF.
5. Set the power switch to the CAMERA position.
   - The camcorder is turned on and enters Camera mode.

When using the remote commander, activate the remote control mode (page 27).

**Note**

When you hold the camcorder by the grip, support it from underneath with your left hand.

**Recording (Full Auto mode)**

6. Press the FULL AUTO button so that the button indicator lights.
Full Auto mode is turned on, activating the TLCS (Total Level Control System) (page 100). Thus Auto Iris, AGC (Auto Gain Control), Auto Shutter, ATW (Auto Tracing White) are set to ON, whereby the brightness and white balance will be automatically adjusted. When you wish to adjust them manually, turn Full Auto mode off, and see; "Adjusting the Iris" on page 44 "Setting the Gain" on page 41 "Setting the Electronic Shutter" on page 42 "Adjusting the White Balance" on page 37

AF (Auto Focus) is not activated by setting the camcorder to Full Auto mode. For information of automatic focus adjustment, see page 49.

7 Press the REC START/STOP button.
You can start with either of the REC START/STOP button on the handle or that on the grip.
(If you are using the IR Remote Commander, press the REC button simultaneously with the unmarked button.)

The front and rear tally lamps light and recording begins.

8 To stop recording, press the REC START/STOP button again.
(If you are using the IR Remote Commander, press the REC PAUSE button simultaneously with the unmarked button.)

Recording stops and the camcorder enters STBY (recording standby) mode.

Note
Recording cannot be restarted after you stop recording until the ACCESS lamp lights in green.

To prevent a switching error
The REC START/STOP button on the handle is incorporated with the REC HOLD lever. If the REC START/STOP button on the handle will not be used, it is recommended to set the lever to the HOLD position to lock the button.

9 Press the REC REVIEW button.
The Rec Review function (page 56) is activated, and the last recorded clip is played back for the specified time on the LCD monitor/EVF screen.
When playback reaches the end of the clip, the camcorder returns to STBY (recording standby) mode.

To delete clips
You can delete the last recorded clip by using the Last Clip DEL function.
See "Deleting the Last Recorded Clip" on page 75.

Use the All Clips DEL function when you wish to delete all recorded clips from a memory card.
See "Deleting All Clips" on page 75.

To specify a clip to be deleted, operate the camcorder in Media mode.
See "Deleting a Clip" on page 84.
**Selecting the Video Format**

You can select various video formats for recording/playback using “Video Format” (page 108) of the OTHERS menu. The current format is displayed on the screen when you press the DISPLAY/BATT INFO button.

**Selectable Formats**

The selectable formats depend on whether “Country” (page 108) of the OTHERS menu is set to “NTSC Area” or “PAL Area.”

The video formats set on this camcorder cover the recording bit rate (HQ/SP), recording picture size (effective resolution), recording frame rate, and recording scan system (i/P).

The frame rates are indicated with two-digit integers, rounding off the fractional part.

When you select an HQ format, recording is made with the bit rate of 35 Mbps VBR.

When you select an SP format, recording is made with the HDV-compatible bit rate of 25 Mbps CBR.

**With “NTSC Area” selected**

**Notes on Clips**

The XDCAM EX-series products employ the FAT32 File System. Thus, recorded materials may be segmented in multiple files depending on the file size. But the camcorder can play such materials seemlessly. A long clip can be recorded crossing over two memory cards in slot A and B. When you copy clips to a hard disk drive, etc. using a computer, it is recommended to use the XDCAM EX Clip Browsing Software on the supplied CD-ROM.

**Note**

If copying is done using Explorer (Windows) or Finder (MAC), the continuity and relationships of recorded materials may not be maintained.

---

**Clip (recording data) and clip name**

When you stop recording, video, audio and subsidiary data from the start to end of the recording are recorded as a single clip on an SxS memory card. For each clip recorded with this camcorder, a clip name of 8 characters (the first four alphanumerics and the second four numerics) is automatically generated.

**Example:** ABCD0001

The first four alphanumerics can be specified as desired using “Clip” (page 108) of the OTHERS menu before you start recording. (It cannot be changed after recording.)

The second four-digit number is automatically counted up in sequence.
Switching the ND Filters

ND filters are available for keeping the aperture in a proper range. Set the ND filter switch according to the brightness of the subject.

Signals from the COMPONENT OUT, SDI OUT, and A/V OUT connectors are also output according to the format selected with this menu.

See “Formats and Limitations of Outputs” on page 116.

Changing the Format

Press the MENU button to set the camcorder to Menu mode, display the OTHERS menu with , and set “Video Format.”

For details on menu operations, see “Basic Menu Operations” on page 94.

Changing the Format

</tr>
</tbody>
</table>

For details on menu operations, see “Basic Menu Operations” on page 94.

Signals from the COMPONENT OUT, SDI OUT, and A/V OUT connectors are also output according to the format selected with this menu.

See “Formats and Limitations of Outputs” on page 116.

Note on recording format in SP 1080/24P mode

When recording in SP 1440 × 1080 mode at 23.98 in Progressive mode (indicated as SP 1080/24P on this camcorder), pictures are recorded at 59.94 in Interlace mode (indicated as SP 1080/60i) by pull-down processing.
Adjusting the White Balance

The white balance must be adjusted to suit the color temperature of the light source. You can select the adjustment mode according to the shooting conditions.

Preset mode

The color temperature is adjusted to the preset value (factory setting: 3200K) in this mode. Select this mode when there is no time to adjust the white balance or when you wish to fix the white balance to a standard condition.

Memory A mode, Memory B mode

- The white balance is adjusted to the value stored in memory A or memory B.
- Pressing the WHT BAL button executes auto white balance and stores the adjusted value in memory A or memory B.

ATW (Auto-Tracing White balance) mode

In this mode, the camcorder automatically adjusts the white balance to the appropriate condition. When the color temperature of the light source changes, the white balance adjustment is automatically executed.

Five steps of adjustment speed can be selected with “ATW Speed” (page 100) of the CAMERA SET menu.

Selecting the Adjustment Mode

Using the switch

You can select Preset mode, Memory A mode, or ATW (Memory B) mode with the WHITE BAL switch.

To the B position of the WHITE BAL switch, ATW mode is assigned at the factory. The setting can be changed with “White Switch <B>” (page 100) of the CAMERA SET menu to select Memory B mode.

Using the Direct menu

When you press the DISPLAY/BATT INFO button, the current adjustment mode and color temperature are displayed on the screen.

- Setting the camcorder to Full Auto mode (page 33) forcibly activates ATW mode.
- Assigning the ATW on/off function to an assignable button permits you to independently activate/deactivate ATW when Full Auto mode is off.

For details on the assignable buttons, see “Changing Functions of the Assignable Buttons” on page 56.

ATW: ATW mode
W:A: Memory A mode
W:B: Memory B mode
W:P: Preset mode

When the Direct menu is in All mode, you can select from among ATW, W:A, W:B, and W:P. When the Direct menu is in Part mode, you can switch between ATW and the mode set with the WHITE BAL switch.

For details on the Direct menu, see “Direct Menu Operation” on page 19.
Executing Auto White Balance

Execute auto white-balance adjustment according to the color temperature of the light source. The adjustment value can be stored in memory A or B.

**Note**

Auto white-balance adjustment cannot be executed in Preset mode.

1. **To store the adjustment value in memory, select Memory A or Memory B mode.**
2. **Select the appropriate ND filter according to the lighting condition.**
3. **Place a white subject under the same lighting condition and zoom in on it so that a white area is obtained on the screen.**
   A white object (white cloth, a white wall, etc.) near the subject may be used in place. Be careful not to have any spots of high illumination on the screen.
4. **Adjust the lens iris opening.**
   Set it to the proper condition if the manual iris adjustment mode is selected.
5. **Press the WHT BAL button.**
   Auto white-balance adjustment begins.

During adjustment, an in-progress message is displayed on the screen. When the adjustment is completed successfully, the message changes to a completion message, and the obtained color temperature is displayed.

- When you execute the adjustment in a memory mode, the adjusted value is stored in memory (A or B) selected in step 1.
- When you execute the adjustment in ATW mode, adjustment in ATW is resumed.

**If auto white-balance adjustment fails**

An error message is displayed on the screen for approximately three seconds.

If the error message is displayed, try auto white-balance adjustment again.

If the error message continues to be displayed after several attempts, consult your Sony service representative.
Displaying the Markers and Zebra Patterns

During recording, various markers and zebra patterns can be inserted into the image on the LCD monitor/EVF screen. This does not affect recording signals.

Displaying the Markers

Use “Marker” of the LCD/VF SET menu. Press the MENU button to set the camcorder to Menu mode, display the LCD/VF SET menu with , and select “Marker” from the menu.

Activating the marker indications

- Set “Setting” to “On” then turn the markers on/off independently.
  No marker is displayed when “Setting” is “Off.”
- Assigning the Marker on/off function to one of the assignable buttons permits you to operate “Setting: On/Off” by pressing the button.

For the assignable buttons, see “Changing Functions of the Assignable Buttons” on page 56.

Displaying the safety-zone marker

Set “Safety Zone” to “On” to insert the safety-zone marker to the screen.
With “Safety Area” you can select the size of the safety-zone marker from among 80%, 90%, 92.5%, and 95% of the picture area.

Displaying the center marker

Set “Center Marker” to “On” to insert the center marker into the screen area.

Displaying the aspect marker

Set “Aspect Marker” to “On” to insert the aspect marker into the screen area.
Select the width of the marker from among 4:3, 13:9, 14:9, and 15:9 with “Aspect Select.”

Example: 4:3

Displaying the guide frame lines

Set “Guide Frame” to “On” to insert the guide frame lines into the screen area.

When the aspect marker is on, the safety zone marker shows the effective area within the aspect marker.
Displaying the Zebra Patterns

A zebra pattern(s) can be inserted to the picture on LCD monitor/EVF screen to check the appropriate luminance level.

Factory-set zebras

1 (70%)

2 (100%)

Turning the zebra-pattern indication on/off

Pressing the ZEBRA button turns the zebra pattern-indication on/off.

Changing the zebra pattern

Using “Zebra” of the LCD/VF SET menu, you can change the zebra pattern to be displayed. Press the MENU button to set the camcorder to Menu mode, display the LCD/VF SET menu with  , and select “Zebra” from the menu.

Zebra Select

Select the zebra pattern(s) to be displayed.

1 (Zebra1): To display a zebra pattern in the area of ±10% centering the video level set with “Zebra1 Level.”

2 (Zebra2): To display a zebra pattern for the video level over 100%.

Both: To display both Zebra1 and Zebra2

Zebra1 Level

Set the center level of Zebra1 in the range of 50 to 107%. The default setting is 70%.
Setting the Gain

You can set the gain of the video amplifier according to the brightness of the subject. Select the setting mode required by the shooting conditions.

Fixed gain mode (manual gain adjustment)

Select the gain of the video amplifier, using the switch or a menu operation.

AGC mode (automatic gain control)

The gain of the video amplifier is automatically adjusted according to the picture brightness.

Recording With Fixed Gain

Selecting the gain with the switch

Select the gain, using the GAIN switch.

Note

When AGC mode is on, the fixed gain cannot be selected.

The gain value at each of the switch positions are set at the factory as follows:

- **L**: 0 dB
- **M**: 9 dB
- **H**: 18 dB

These values can be changed in the range of −3 dB to +18 dB, using the CAMERA SET menu.

To change

Press the MENU button to set the camcorder to Menu mode, display the CAMERA SET menu with \(\text{Gain Setup}\), and select “Gain Setup” from the menu.

For details on menu operations, see “Basic Menu Operations” on page 94.

Selecting gain using the Direct menu

When you press the DISPLAY/BATT INFO button, the current gain value is displayed on the screen.

When the Direct menu is in All mode, you can change the gain in steps of 3 dB with the Direct menu by operating the joystick or the jog dial. You can also select AGC mode with the Direct menu.

When the Direct menu is in Part mode, you can switch between AGC and the gain selected with the GAIN switch.

Note

When the camcorder is in Full Auto mode (page 33), the Direct menu cannot be selected.

For details on the Direct menu, see “Direct Menu Operation” on page 19.

Recording in AGC Mode

When you set the camcorder to Full Auto mode (page 33), AGC mode is forcibly selected.

When Full Auto mode is off, you can independently turn AGC mode on by setting “AGC” to “On” with “TLCS” (page 100) of the CAMERA SET menu or selecting AGC with the Direct menu.
Setting the Electronic Shutter

The electronic shutter of the camcorder permits you to change the shutter speed (the accumulation time per recording frame). The electronic shutter can be adjusted automatically or manually as required.

Fixed Shutter (manual adjustment) modes

Recording is made with a specified shutter speed (accumulation time).

Standard modes (Speed mode/Angle mode)

These modes may be especially effective when you wish to record a quick-moving subject with little blurring.

You can select Speed mode or Angle mode. In Angle mode, you can specify the shutter speed by setting the shutter angle.

ECS (Extended Clear Scan) mode

Specify the shutter speed by frequency. This mode may be used to shoot the monitor screen eliminating horizontal bands.

SLS (Slow Shutter) mode

For shooting a subject in low-level lighting conditions. Specify the shutter speed in the number of accumulated frames.

EX Slow Shutter mode

This is an advanced mode of SLS mode. The shutter speed is specified in the number of accumulated frames. Up to 64 frames can be accumulated in this mode, permitting you to obtain low-noise clear pictures in low light levels or a surreal pictures with afterimages.

Auto Shutter mode

The shutter speed is automatically adjusted according to the picture brightness.

Shooting in a Fixed Shutter Mode

When you set the SHUTTER switch to ON, the fixed shutter is turned on in the mode and with the shutter speed you specified with “Shutter” of the CAMERA SET menu.

Note

When Auto Shutter mode is ON, the fixed shutter cannot be selected.

Setting the fixed shutter with the CAMERA SET menu

The shutter mode and shutter speed can be set with the CAMERA SET menu. Press the MENU button to set the camcorder to Menu mode, display the CAMERA SET menu with 

<table>
<thead>
<tr>
<th>Shutter Speed</th>
<th>Return Mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/125</td>
<td>Speed</td>
</tr>
<tr>
<td>180°</td>
<td>ECS Frequency: 60.02</td>
</tr>
<tr>
<td>60.02</td>
<td>SLS Frame : 2</td>
</tr>
</tbody>
</table>

Speed (standard speed) mode

Set “Mode” to “Speed,” and specify the time ([ 1/ setting value ] sec.) with “Shutter Speed.” The available setting values vary depending on the current frame rate.

<table>
<thead>
<tr>
<th>Frame rate</th>
<th>Shutter speed (sec.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>60i, 60P</td>

<tr>
<td>24P</td>
<td>1/32, 1/48, 1/50, 1/60, 1/96, 1/125, 1/250, 1/500, 1/1000, 1/2000</td>
</tr>
</tbody>
</table>
Setting the Electronic Shutter

Recording

**Angle (standard angle) mode**
Set “Mode” to “Angle,” and specify the shutter angle with “Shutter Angle.”
You can select from among 180, 90, 45, 22.5, and 11.25 degrees.

**ECS (Extended Clear Scan) mode**
Set “Mode” to “ECS,” and specify the frequency with “ECS Frequency.”
The available setting values vary depending on the current frame rate.

**SLS (Slow Shutter) mode**
Set “Mode” to “SLS,” and specify the number of accumulated frames with “SLS Frame.”
You can select in the range of 2 to 8 frames.

**Note**
Slow Shutter cannot be used in SP 1080/24P mode or Slow & Quick Motion mode.

Setting with the Direct menu

When you press the DISPLAY/BATT INFO button, the current shutter mode and the set value are displayed.

When the Direct menu is in All mode, you can change the shutter mode and speed with the Direct menu by operating the joystick or the jog dial.

**Notes**
- When the Direct menu is in Part mode, you cannot turn the shutter on/off with the Direct menu if the SHUTTER switch is set to ON. If the SHUTTER switch is set to OFF, only switching between Auto Shutter and Shutter OFF.
- The Direct menu cannot be selected when the camcorder is in Full Auto mode (page 33) or when the EX Slow Shutter mode is set to “On.”

### Frame rate Shutter speed (sec.)

<table>
<thead>
<tr>
<th>Frame rate</th>
<th>Shutter speed (sec.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>25P</td>
<td>1/33, 1/50, 1/60, 1/100, 1/125, 1/250, 1/500, 1/1000, 1/2000</td>
</tr>
<tr>
<td>30P</td>
<td>1/40, 1/50, 1/60, 1/120, 1/125, 1/250, 1/500, 1/1000, 1/2000</td>
</tr>
</tbody>
</table>

For details on the Direct menu, see “Direct Menu Operation” on page 19.

### Shooting in EX Slow Shutter Mode

Select “EX Slow Shutter” from the CAMERA SET menu.

**Notes**
- EX Slow Shutter cannot be used in SP 1080/24P mode or Slow & Quick Motion mode.
- The SHUTTER switch has no effect on the EX Slow Shutter setting.
- The EX Slow Shutter On/Off setting cannot be changed during recording.
- You cannot set the camcorder to Full Auto mode (page 33) when the EX Slow Shutter mode is set to “On.”

### Shooting in Auto Shutter Mode

When you set the camcorder to Full Auto mode (page 33), Auto Shutter is forcibly selected.

When Full Auto mode is off, you can independently turn Auto Shutter mode on by setting “Auto Shutter” to “On” with “TLCS” (page 100) of the CAMERA SET menu.
Adjusting the Iris

Adjust the iris opening according to the brightness of the subject. You can adjust it manually or automatically.

Auto Iris mode

The iris is automatically adjusted according to the brightness of the subject.

Manual Iris mode

Adjust the iris opening using the iris ring or with a menu operation.

To adjust the target level with the Setup menu

Set “Level” of “TLCS” (page 100) of the CAMERA SET menu.

Recording in Auto Iris Mode

When the camcorder is in Full Auto mode (page 33), Auto Iris mode is forcibly turned on.
When Full Auto mode is off, you can turn it on by setting the IRIS switch to AUTO.
You can select the target level (to make the picture brighter or darker) of the Auto Iris control.
(The gain control in AGC mode and the shutter speed control in Auto Shutter mode are adjusted in synchronization.)

To adjust the target level with the Direct menu

The target level can also be selected using the Direct menu.
When you press the DISPLAY/BATT INFO button, the current setting is displayed on the screen.

You can change the setting with the Direct menu by operating the joystick or the jog dial.
For details on the Direct menu, see “Direct Menu Operation” on page 19.

Adjusting the Iris Manually

Set the IRIS switch to MANU to adjust the iris manually.
Rotate the iris ring for the desired iris opening.
Adjusting the Zoom

You can adjust the zoom in Manual mode or Power (Servo) mode on this camcorder.

**Manual Zoom mode**

Rotate the zoom ring to adjust the zoom.

**Power Zoom (Servo) mode**

You can adjust the zoom by pressing the power zoom lever or zoom button on the handle. The supplied IR Remote Commander and optional lens remote control unit can also be used.

The current zoom position is displayed on the screen in the range of 0 (Wide) to 99 (Tele) when you press the DISPLAY/BATT INFO button.

The numerical indication can be changed to that in a bar by changing the “Zoom Position” setting of “Display On/Off” (page 104) of the LCD/VF SET menu.

**Switching the Zoom Mode**

Switching between Manual mode and Servo mode is performed with the ZOOM switch located on the bottom of the camcorder.

**Operating the Zoom Manually**

Setting the ZOOM switch to the MANU position for Manual Zoom mode activates the zoom ring. Rotate the zoom ring to adjust the zoom.

**Using the Power Zoom**

Setting the ZOOM switch to the SERVO position for Servo mode activates the power zoom. In Servo mode, the power zoom lever on the grip and the ZOOM button on the handle are activated.
To adjust with the power zoom lever on the grip

Press the W (wide) side for a wider angle or the T (telephoto) side for a closer angle. Pressing the lever deeper sets zooming faster.

To adjust with the ZOOM button on the handle

Press the W side for a wider angle or the T side for a closer angle. Zooming is activated at the speed selected with the speed switch. The zoom speed assignment can be changed with the CAMERA SET menu.

<table>
<thead>
<tr>
<th>Speed switch</th>
<th>ZOOM button operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>H</td>
<td>Zoom changes with the speed set by “High” of “Zoom Speed” of CAMERA SET menu. (Default: 70)</td>
</tr>
<tr>
<td>L</td>
<td>Zoom changes with the speed set by “Low” of “Zoom Speed” of CAMERA SET menu. (Default: 30)</td>
</tr>
<tr>
<td>OFF</td>
<td>Disabled</td>
</tr>
</tbody>
</table>

When adjusting with the ZOOM button of the IR Remote Commander

The zooming speed depends on the “Remote” setting (default: 50) of “Zoom Speed” of the CAMERA SET menu.

To use the IR Remote Commander, see “Using the IR Remote Commander” on page 27.

When using a lens remote controller

Zooming can also be controlled from an optional lens remote controller connected via the LENS REMOTE connector.

For operation of the optional lens remote controller, refer to the operation guide of the lens remote controller.
Adjusting the Focus

You can select any of three modes for focus adjustments.

**Full MF (Full Manual Focus) mode**

Only adjustment with the focus ring is effective in this mode. You can adjust the focus from $\infty$ to the minimum length by rotating the ring. The ring rotates endlessly in the both directions.

**MF (Manual Focus) mode**

In this mode, auto focus can be temporarily activated by pushing the PUSH AF button. The MF Assist function can be used for assistance.

**AF (Auto Focus) mode**

Auto focus functions continuously in this mode. The focus ring and the PUSH AF button can also be used.

**Note**

The infinity position has some margin to compensate for focus change caused by variation in ambient temperature. When shooting an image at infinity in MF or Full MF mode, adjust the focus while observing the image on the LCD monitor/EVF screen.

**Expanded Focus**

When you press the EXPANDED FOCUS button, the center area of the picture is magnified on the LCD monitor/EVF screen, making the focus adjustment easier. Press the EXPANDED FOCUS button again to resume the normal angle for recording.

**Adjusting in Full MF Mode**

Pull the focus ring rearward (toward the camcorder body) to set the camcorder to Full MF mode. Focus can only be adjusted with the focus ring manually.

**Note**

The focus instantly moves to the range index position when you pull the focus ring rearward.
Peaking
When you press the PEAKING button, the peaking function is activated. This function emphasizes the contours of the images on the LCD monitor/EVF screen, making manual focusing easier.
This function does not affect recording signals. The emphasis level and color of the contours can be set with “Peaking” (page 103) of the LCD/VF SET menu.

Adjusting in MF Mode
Slide the focus ring forward (toward the lens hood) and set the FOCUS switch to MANU to set the camcorder to MF mode. In this mode, you can activate Auto Focus only when required.

Adjusting the focus with the focus ring
Rotate the focus ring for the best focus while observing the picture on the LCD monitor/EVF screen.
The range index of the ring is invalid in MF mode.

One-Push (Momentary) Auto Focusing
Push the PUSH AF button. Auto focusing momentarily activates (One-Push Auto Focusing).
One-Push Auto Focusing is terminated when the subject comes in focus.

MF Assist function
When you stop rotating the iris ring with the MF Assist function active, auto focusing starts, performing fine focus adjustment for the subject in the center of the screen. When the fine adjustment is completed, automatic focusing with the MF Assist function is terminated.

Activating the MF Assist function using the CAMERA SET menu
Set “MF Assist” (page 98) of the CAMERA SET menu to “On.”
Activating the MF Assist function using the Direct menu

The current focus adjustment mode is displayed on the screen when you press the DISPLAY/BATT INFO button.

In MF mode, you can activate/deactivate the MF Assist function with the Direct menu by operating the joystick or jog dial. When the function is active, an asterisk mark is displayed to the right of the mode indication.

Note

The Direct menu cannot be selected in a mode other than MF mode.

For details on the Direct menu, see “Direct Menu Operation” on page 19.

Adjusting in AF Mode

Slide the focus ring forward (toward the lens hood) and set the FOCUS switch to AUTO to set the camcorder to AF mode. In this mode, focus is always adjusted automatically.

The range index of the ring is invalid in AF mode.

Focusing in AF mode

In AF mode the camcorder continuously checks changes of images and activates auto focusing each time it detects a change. The auto focus adjustment is terminated when the subject comes into focus, and the camcorder stands by until the next change is detected.

In AF mode, auto focusing is also activated when you press the PUSH AF button or operate the focus ring.

Using Macro Mode

When you set the MACRO switch to ON in AF or MF mode, Macro mode is activated, permitting you to adjust the focus in a range that includes the micro area. The Macro mode is invalid in Full MF mode.
### Eliminating Picture Blurring (Steady Shot)

By activating the Steady Shot function, blurring of images due to camera shaking can be reduced.

#### Setting with the CAMERA SET menu

Set “Steady Shot” (page 101) of the CAMERA SET menu to “On.”

#### Setting with the Direct menu

When you press the DISPLAY/BATT INFO button, the setting of the Steady Shot function is displayed on the screen.

![Setting with the Direct menu](image)

You can turn it on/off with the Direct menu by operating the joystick or the jog dial.  
*For details on the Direct menu, see “Direct Menu Operation” on page 19.*

#### Note on use of a wide-conversion lens

Two operation modes are provided for Steady Shot: Normal mode and Wide mode (for a wide conversion lens).  
When you attach the optional VCL-EX0877 wide conversion lens, be sure to set “Wide Conversion” (page 100) of the CAMERA SET menu to “On.”

**Note**

If the camcorder is fixed to a tripod for stable condition, deactivate the Steady Shot function.

### Reducing Flickers

To reduce flickers, try either of the following two methods:

#### Setting the shutter speed according to the power-supply frequency

Activate the electronic shutter (page 42) and set the shutter speed according to the power supply frequency.

**When the frequency is 50 Hz**
Set the shutter speed to $\frac{1}{50}$ or $\frac{1}{100}$ seconds.

**When the frequency is 60 Hz**
Set the shutter speed to $\frac{1}{60}$ or $\frac{1}{120}$ seconds.

#### Using the Flicker-Reduction function

Set “Flicker Reduce” (page 98) of the CAMERA SET menu to “Auto” or “On” and set “Frequency” to the power-supply frequency (50 Hz or 60 Hz).

**Note**

If the frame rate selected for recording is close to the power-supply frequency, flicker may not be reduced sufficiently even if you activate the Flicker-Reduction function. In such cases, use the electronic shutter.
Setting the Time Data

Time data, such as the timecodes, user bits, and the clock time, are recorded with pictures.

Running Modes of the Timecode

For the timecode, three running modes and Clock mode can be selected.

Rec Run mode

The timecode advances during recording only. The continuity of the timecode is maintained between clips in the sequence of recording as long as the SxS memory card is not changed. If you remove the memory card and record on another card, the timecode will not continue when you return the first card to the slot again.

Free Run mode

The timecode keeps advancing regardless of recording.

Regen mode

The timecode advances during recording only. When you insert another memory card, the camcorder starts next recording so that the timecode continues to the last recorded timecode on the card.

Clock mode

The current clock time is recorded for the timecode.

Note

In Interval Recording, Frame Recording, Slow & Quick Motion Recording, the timecode advances in Rec Run mode regardless of the “Run” setting if you set “Mode” of “Timecode” to “Preset.” If you set it to “Clock,” the timecode advances in Regen mode.

Setting the Timecode

Specify the timecode to be recorded with “Timecode” and “TC Format” of the TC/UB SET menu.

For details on menu operations, see “Basic Menu Operations” on page 94.

<table>
<thead>
<tr>
<th>TC/UB SET</th>
<th>Timecode</th>
<th>Mode</th>
<th>Users Bit</th>
<th>Run</th>
<th>Setting</th>
<th>TC Format</th>
<th>Reset</th>
</tr>
</thead>
<tbody>
<tr>
<td>Return</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Setting the timecode to a desired value

1. Set “Mode” of “Timecode” to “Preset.”
2. Specify the timecode value on the Setting line and select “SET.”

Resetting the timecode

You can reset the timecode to be recorded in running modes to “00:00:00:00.”

1. Select “Reset” of “Timecode.”
2. Select “Execute.”

Using the actual time as the timecode

Set “Mode” of “Time Code” to “Clock.” The time of the built-in clock is recorded as the timecode.

Switching between DF and NDF of the timecode

Using “TC Format” of the TC/UB SET menu, DF (drop-frame mode) and NDF (non-drop frame mode) of the timecode can be switched. Note, however, that the mode is fixed either to DF or NDF regardless of the TC Format setting, depending on the current frame-rate setting.

Restrictions on the timecode

The timecode setting is restricted by the current video format.
The frame digits in "Setting" are limited to 00, 04, 08, 12, 16, and 20. The frame at the beginning of recording is limited to 00, 04, 08, 12, 16, and 20. The frame digits of the timecode added to the SDI OUT connector output are changed to values in the range of 00 to 29.

Even in Clock mode, the timecode may be gradually shifted, because it is counted by NDF. When adding the timecode to the output from the COMPONENT OUT connector or the video output from the A/V OUT connector, there may be a field that has dual timecodes because of the 2-3 pull-down process.

With DF, the frame digits can be set as desired in the range of 00 to 29. With NDF, the frame at the beginning of recording is limited to 00, 05, 10, 15, 20, and 25.

**Setting the User Bits**

You can add a hexadecimal number of 8 digits for pictures as the user bits. The user bits can also be set to the current date. Use “Users Bit” of the TC/UB SET menu.

<table>
<thead>
<tr>
<th>Video formats</th>
<th>Frame setting</th>

</tbody>
</table>

1) The frame digits in “Setting” are limited to 00, 04, 08, 12, 16, and 20. The frame at the beginning of recording is limited to 00, 04, 08, 12, 16, and 20. The frame digits of the timecode added to the SDI OUT connector output are changed to values in the range of 00 to 29.

2) Even in Clock mode, the timecode may be gradually shifted, because it is counted by NDF. When adding the timecode to the output from the COMPONENT OUT connector or the video output from the A/V OUT connector, there may be a field that has dual timecodes because of the 2-3 pull-down process.

3) With DF, the frame digits can be set as desired in the range of 00 to 29. With NDF, the frame at the beginning of recording is limited to 00, 05, 10, 15, 20, and 25.

**Setting eight digits as desired**

1) Set “Mode” of “Users Bit” to “Fix.”

2) Specify the values on the Setting line and select “SET.”

   You can set hexadecimal digits A to F with the corresponding alphabetics.

**Recording the current date as the user bits**

Set “Mode” of “Users Bit” to “Date.”

The current date is displayed on the Setting line.

**Displaying the Time Data**

In Camera mode, pressing the DISPLAY/BATT INFO button displays the time data on the screen.

The indication is switched among the timecode, user bits, and recording duration each time you press the TC/U-BIT/DURATION button.

Recording Audio Signals

Two channels (CH-1/CH-2) of audio can be recorded (Linear PCM recording) in synchronization with video recording. You can use the built-in stereo microphones (omni-directional electret condenser microphones) or 2-channel external audio inputs to the AUDIO IN connectors by switching with the AUDIO IN switches.

Using the Built-in Stereo Microphones

Set the AUDIO IN switches, both CH-1 and CH-2, to INT.

Using External Inputs

1. Set the AUDIO IN switches CH-1 and CH-2 to EXT.
2. Connect external audio sources to the AUDIO IN connectors CH-1 and CH-2.
3. Set the LINE/MIC/+48V switches CH-1 and CH-2 to LINE (line level: +4 dBu).

Using an External Microphone

You can use an external microphone for recording, such as the ECM-673 Electret Condenser Microphone.

1. Loosen the screw of the microphone holder and open the cover.
2. Attach a microphone, close the microphone holder cover for the original condition to secure, then connect the microphone cable to either of the AUDIO IN connectors (CH-1 or CH-2).
3 Set the corresponding AUDIO IN switch (CH-1 or CH-2) to EXT.

4 Set the corresponding LINE/MIC/+48V switch (CH-1 or CH-2) according to the connected microphone.
   **MIC**: For a microphone that requires no power supply
   **+48V**: For a microphone that requires +48V power supply (such as the ECM-673)

### Adjusting the Audio Recording Levels

You can select automatic or manual adjustment mode independently for each channel.

**To adjust the levels automatically (AGC)**

When the AUDIO SELECT switches CH-1 and CH-2 are set to AUTO, the audio recording levels are automatically adjusted.

**To adjust the levels manually**

Set the AUDIO SELECT switches CH-1 and CH-2 to MANUAL, and adjust the audio recording levels by turning the AUDIO LEVEL controls. The value is set to 0 dB when the control is set to 5. Setting to 10 maximizes the level (+12 dB) and setting to 0 minimizes it (−∞).

The input levels are displayed on the screen when you press the DISPLAY/BATT INFO button.

---

### Audio recording in special recording modes

- No audio recording is made in Interval Recording or Frame Recording.
- No audio recording is made in Slow & Quick recording if the recording frame rate is set to a value different from the playback frame rate.

### Monitoring the Audio

You can monitor the sounds being recorded with the headphones connected to the headphone connector (Stereo mini jack).

**Headphone connector**

**MONITOR VOL buttons**

**Note**

The built-in speaker is disabled in Camera mode.

**To adjust the audio monitoring volume**

Use the MONITOR VOL buttons. Pressing the + button increases the volume, and pressing the − button decreases it. To muffle the sound, set it to the minimum level.

While you adjust the volume, the level is displayed as a bar on the screen.
Outputting the Color Bars and Reference Tone

The camcorder can output a color-bar signal in place of the camera picture. A 1-kHz reference tone is output with the color bar signal if “1kHz Tone” of “Audio Input” (page 101) is set to “On” with the AUDIO SET menu. The color-bar signal and reference-tone signal are also fed out from the SDI OUT, COMPONENT OUT, and A/V OUT connectors.

Press the BARS/CAM button.
The camera picture is switched to color bars. To return to the camera picture, press the button again.

You can select the type of color bars with “Color Bar Type” (page 98) of the CAMERA SET menu. **Multi:** ARIB multiformat color bars
75%: Vertical stripes of 75% luminance
100%: Vertical stripes of 100% luminance

**Notes**

- When recording of the camera image is in progress, it cannot be switched to the color-bar picture even if you press the BARS/CAM button. (You can switch the color-bar picture to the camera picture.)
- The color bar mode cannot be selected in Slow & Quick Motion mode and EX Slow Shutter mode.

Recording Shot Marks

When you record shot marks for important scenes as subsidiary data, you can access the marked points easily on a Shot Mark screen, which only displays scenes with shot marks only. This increases editing efficiency.

For the Shot Mark Screen, see “Displaying the SHOT MARK Screen” on page 85.

The camcorder permits you to record two types of shot marks: shot mark 1 and shot mark 2. Shot marks can be recorded as needed during recording or can be added after recording while checking the playback pictures.

**Inserting a shot mark during recording**

Activate the IR Remote Commander (page 27), and use the SHOTMARK 1 or 2 button.

Press the SHOTMARK 1 or 2 button where you wish to insert a mark.
If the Shot Mark1 or Shot Mark2 function is assigned to an assignable button, you can also use it instead (page 56).

A shot mark of the type corresponding to the button you press is recorded.

For operations to add shot marks after recording, see “Adding shot marks during playback” on page 80 and “Adding/Deleting Shot Marks” on page 86.
Rec Review

You can review the last recorded clip on the screen (Rec Review).

Press the REC REVIEW button after recording is finished.

You can assign the Rec Review function to an assignable button to use it instead (page 56).

Playback of the specified block of the clip begins. In Rec Review, the last 3 seconds, 10 seconds, or the entire part of the clip is displayed, depending on the “Rec Review” setting (page 99) of the CAMERA SET menu. It is set to 3 seconds at the factory. Rec Review is terminated at the end of the clip, resuming STBY (recording standby) status.

Notes

- If the duration of the last recorded clip is less than the time (3 or 10 seconds) specified for Rec Review, the clip is played back from the beginning to the end.
- During Rec Review playback, only the STOP button is valid. When the STOP button is pressed, Rec Review is canceled, and the camcorder returns to STBY (recording standby) status.
- If the video format is changed after recording, Rec Review cannot be performed.
- The Setup and PICTURE PROFILE menus cannot be operated during Rec Review.

Changing Functions of the Assignable Buttons

The camcorder has four assignable buttons to which you can assign various functions for convenience.

The following functions are assigned at the factory:

ASSIGN 1 button (LENS INFO)
Depth-of-field indication on/off

ASSIGN 2 button (BRT DISP)
Brightness-level indication on/off

ASSIGN 3 button (HISTOGRAM)
Histogram indication on/off

ASSIGN 4 button
No function is assigned (Off).

Changing Functions

Use “Assign Button” of the OTHERS menu.

For details on menu operations, see “Basic Menu Operations” on page 94.

1 Select “Assign Button” from the OTHERS menu.
2 Select the button to which you wish to assign a function.

3 Select the function to be assigned.

</table>

4 Exit the menu.

The assigned functions can be viewed on the BUTTON/REMOTE status screen (page 91).

---

**Interval Recording**

The Interval Recording (time-lapse recording) function is especially effective for shooting objects that move very slowly. The specified number of frames are automatically recorded at the specified intervals.

It is recommended to fix the camcorder to a tripod or equivalent and use the IR Remote Commander to start/stop recording rather than pressing the REC START/STOP button of the camcorder.

**Notes**

- Interval Recording cannot be set to “On” simultaneously with Frame Recording or Slow & Quick Motion. When you set Interval Recording to “On,” Frame Recording and Slow & Quick Motion are forcibly set to “Off.”
- No audio recording is executed in Interval Recording.
- Interval Recording cannot be performed if an SP video format is selected with “Video Format” and “i.LINK I/O” is set to “Enable” with the OTHERS menu.
- Interval Recording cannot be performed if “Video Format” of the OTHERS menu is set to SP 1080/24P.

### Preparatory Settings

Before starting Interval Recording, make the necessary settings on the CAMERA SET menu in advance.
For details on menu operations, see “Basic Menu Operations” on page 94.

1. Select “Interval Rec” of the CAMERA SET menu.

2. Set “Setting” to “On.”
   The camcorder enters Interval Recording mode.
   When the special recording mode indication on the screen is active, “Interval Rec” flashes on the screen.

3. Set the time between recordings with “Interval Time.”
   You can select the time from among 1 to 10/15/20/30/40/50 seconds, 1 to 10/15/20/30/40/50 minutes, and 1 to 4/6/12/24 hours by scrolling the display.

4. Set the number of frames to be recorded at a time with “Number of Frames.”
   When “Video Format” (page 108) is set to “720/60P” or “720/50P,” you can select from among 2, 6, and 12 frames.
   With other settings, you can select from among 1, 3, 6, and 9 frames.

5. Exit the menu.

### Performing Interval Recording

When the preparatory settings are completed, you can start recording.

**Press the REC START/STOP button.**

Interval Recording begins.
The flashing “Interval Rec” on the screen is now steadily lit.

**Notes**
- You cannot change the “Interval Time” and “Number of Frames” settings while Interval Recording is in progress. To change them, pause recording.

### Stopping Interval Recording

**Press the REC START/STOP button.**

Interval Recording stops.
To restart Interval Recording, press the button again.

### Canceling Interval Recording mode

Set “Setting” of “Interval Rec” of the CAMERA SET menu to “Off.”

**Notes**

It automatically returns to “Off” when you set the power switch to OFF, while the “Interval Time” and “Number of Frames” settings are maintained.

- The Freeze Mix function and Rec Review function cannot be used in Interval Recording mode.
- The timecode is recorded in Rec Run mode (page 51) during Interval Recording.
- Some extra frames may be recorded if you stop recording or switch the card slot while recording is halted in Interval Recording mode.
Frame Recording

The Frame Recording function is especially effective for clay animation recording. The specified number of frames are recorded intermittently when you press the REC START/STOP button. It is recommended to fix the camcorder to a tripod or equivalent and use the IR Remote Commander to start/stop recording rather than pressing the REC START/STOP button of the camcorder.

Notes
- Frame Recording cannot be set to “On” simultaneously with Interval Recording or Slow & Quick Motion. When you set Frame Recording to “On,” Interval Recording and Slow & Quick Motion are forcibly set to “Off.”
- No audio recording is executed in Frame Recording.
- Frame Recording cannot be performed if an SP video format is selected with “Video Format” and “i.LINK I/O” is set to “Enable” with the OTHERS menu.
- Frame Recording cannot be performed if “Video Format” of the OTHERS menu is set to SP 1080/24P.

Preparatory Settings

Before starting Frame Recording, make the necessary settings on the CAMERA SET menu in advance.

For details on menu operations, see “Basic Menu Operations” on page 94.

1 Select “Frame Rec” of the CAMERA SET menu.

2 Set “Setting” to “On.”

The camcorder enters Frame Recording mode. When the special recording mode indication on the screen is active, “Frame Rec” flashes on the screen.

3 Select the “Number of Frames” value for one recording session.

You can select from among 2, 6, and 12 when “Video Format” is set to 720/60P or 720/50P. With other video formats, you can select from among 1, 3, 6, and 9.

4 Exit the menu.

Performing Frame Recording

When the preparatory settings are completed, you can start recording.

1 Press the REC START/STOP button.

Recording in Frame Rec mode begins. The “Frame Rec” indication stops flashing. When the number of frames you specified with the menu are recorded, the camcorder automatically enters FRM STBY (Frame Rec Standby) status.

2 Press the REC START/STOP button again.

Each time you press the REC START/STOP button, the camcorder records the specified number of frames then enters FRM STBY status.

Notes
- Recording cannot be stopped until the specified number of frames are recorded. If the power switch is set to OFF during recording, the power is only shut off after the specified number of frames are recorded.
- The Freeze Mix function and Rec Review function cannot be used while recording in Frame Rec mode is in progress.
- You cannot change the “Number of Frames” setting while recording in Frame Rec mode is in progress. To change it, pause the recording.
- The timecode is recorded in Rec Run mode (page 51) during Frame Recording.
- Some extra frames may be recorded if you stop recording or switch the card slot while recording is paused in Frame Rec mode.
Stopping Frame Recording

Set “Setting” of “Frame Rec” of the CAMERA SET menu to “Off.”
Recording stops and Frame Rec mode is canceled.

Notes

It automatically returns to “Off” when you set the power switch to OFF, while the “Number of Frames” setting is maintained.

Slow & Quick Motion Recording

When an HQ Progressive (P) video format is selected (page 35), you can set the frame rate for recording different from that for playback. By recording at the different frame rate, you can obtain smoother slow-motion or quick-motion effect when compared with slow-speed or fast-speed playback of a material recorded at the normal recording speed.

Example

When the video format is HQ 720/24P, recording with a frame rate between 1 and 23 fps provides a quick-motion effect in playback, and recording with the frame rate between 25 and 60 fps provides a slow-motion effect in playback.

Notes

- Slow & Quick Motion cannot be set to “On” simultaneously with Frame Recording or Interval Recording. When you set Slow & Quick Motion to “On,” Frame Recording and Interval Recording are forcibly set to “Off.”
- No audio recording is made if the recording frame rate is set to a value different from the playback frame rate.
- Slow & Quick Motion recording cannot be made if “Video Format” of the OTHERS menu is set to HQ1080/60i, HQ1080/50i, SP1080/60i, SP1080/50i, or SP1080/24P.

Preparatory Settings

Before starting Slow & Quick Motion recording, make the necessary settings with the CAMERA SET menu in advance.

For details on menu operations, see “Basic Menu Operations” on page 94.

1 Select “S&Q Motion” from the CAMERA SET menu.
2 Set “Setting” to “On.”
The camcorder enters Slow & Quick Motion mode.
When the special recording mode indication on the screen is active, “S&Q Motion” is displayed on the screen.

3 Select the frame rate for recording with “Frame Rate.”
The setting range varies depending on the current video format.
With a 1080 format: 1 to 30 fps
With a 720 format: 1 to 60 fps

4 Exit the menu.

Setting the recording frame rate with the Direct menu
When the special recording mode indication on the screen is active, [Recording frame rate]/[Playback frame rate] fps is displayed under “S&Q Motion.”

You can change the recording frame rate with the Direct menu by operating the joystick or the jog dial.

For details on the Direct menu, see “Direct Menu Operation” on page 19.

Recording in Slow & Quick Motion Mode
When the preparatory settings are completed, you can start recording.

Press the REC START/STOP button.
Slow & Quick Motion recording begins.

Notes
• You cannot change the Frame Rate setting while Slow & Quick Motion recording is in progress. To change it, pause the recording.
• The timecode is recorded in Rec Run mode during Slow & Quick Motion recording (page 51).

Stopping recording
Press the REC START/STOP button.
Slow & Quick Motion recording stops.

Note
When recording at a low-speed frame rate, it may take time until recording stops after you press the REC START/STOP button.

Canceling Slow & Quick Motion mode
Set “Setting” of “S&Q Motion” of the CAMERA SET menu to “Off.”

Note
It automatically returns to “Off” when you set the power switch to OFF, while the “Frame Rate” setting is maintained.
Freeze Mix: Image Alignment

Using the Freeze Mix function, an image (still picture) of a recorded clip can be temporarily superimposed on the current camera picture, permitting you to easily align images for next recording.

To use the Freeze Mix function
Assign the Freeze Mix function to one of the assignable buttons.
For details, see “Changing Functions of the Assignable Buttons” on page 56.

Superimposing a Freeze Mix image

1. Stop recording to set the camcorder to STBY (recording standby) status.

2. Press the REC REVIEW button to review the recorded images, or press the ASSIGN button to which you assigned “Freeze Mix.”

3. Press the ASSIGN button to which you assigned “Freeze Mix” at the image with which you want align.

The image where you pressed the ASSIGN button in step 3 is displayed as a still picture over the current camera picture.

Canceling Freeze Mix status
You can cancel it with the ASSIGN button to which you assigned “Freeze Mix” or the REC START/STOP button.

- When you cancel Freeze Mix status by pressing the ASSIGN button, the normal camera picture is restored.
- When you cancel Freeze Mix status by pressing the REC START/STOP button, normal recording begins.

Notes

- If the recorded picture and the current camera picture differ in video format, the Freeze Mix display cannot be achieved.
- The Freeze Mix function cannot be used if the recording video format is SP 1080/24P.
- The Freeze Mix display cannot be obtained in Quick & Slow Motion mode or Slow Shutter mode.
- You cannot operate the Setup menus and PICTURE PROFILE menu in Freeze Mix status.
The Shot Transition function helps you to easily obtain complex picture effects by registering camera settings or conditions as a “shot” to be reproduced in a recording sequence. Your settings for focus, zoom, iris, gain, shutter speed, white balance, color matrix, and detail level can be registered in combination in one shot, and you can change the current camera settings to those of the shot, or the settings reproduced from one shot to those of another Shot, resulting in a smooth transition of scenes. For example, you can shift the focus from a closer object to a farther object, or change the depth of field by adjusting the iris. In addition, you can develop scenes under different recording conditions smoothly. If you register the manual adjustment function for white balance, the scenes will develop smoothly between objects indoors and those outdoors.

Notes

- Shot transition cannot be activated in combination with any of the EX Slow Shutter, Interval Recording, Frame Recording, and Slow & Quick Motion functions.
- If you wish to shift the focus in a shot transition, set the focus adjustment mode to MF or AF (see page 47). The focus will not be shifted if Full MF mode is selected.
- If you wish to shift the zoom in a shot transition, set the ZOOM switch to SERVO (see page 45). The zoom will not be shifted with the MANU setting.
- If you register a focus position in a macro area with the MACRO switch ON, the focus may not be shifted to the registered position if a shot transition is executed with the MACRO switch set to OFF.

Shot-transition operation buttons and indications

For shot-transition operations, use the three TRANSITION operation buttons on the upper panel.

A button and B button
You can register a Shot to each of the buttons.

MODE button and indicator
When you press this button, the camcorder enters Shot Transition operation mode, and the indicator of the button lights. The shot transition operation area is displayed on the screen. Each time you press the button, the shot-transition operation mode cycles among Store, Check, Execute, and Off (normal Camera mode). In Execute mode, the shot transition information area appears.

Shot-transition operation area

Note
Camera operations are disabled when the shot transition operation mode is Check or Execute.
When adjustments are required, set the mode to Store.

**Preparatory Settings**

Before you start recording using the Shot Transition function, make the necessary settings with the CAMERA SET menu in advance. The conditions you set are indicated in the shot transition information area on the screen when you set the shot-transition operation mode to “Execute.”

**Shot-transition information area**

- **Progress bar**
- **Transition pattern**
- **Transition time**
- **Rec Link status**
- **Start timer indication**

**Setting procedure**

1. Select “Shot Transition” from the CAMERA SET menu.

2. Specify the conditions for a shot transition.

   **Trans Time**
   After you set “Time/Speed” to “Time,” set the duration of a transition in the range of 2 to 15 sec in steps of 1 second.

   **Trans Speed**
   After you set “Time/Speed” to “Speed,” set the zoom transition speed (specifying the time to be taken for the zoom moving from the TELE end to the WIDE end at a certain speed). The setting range is from 1 to 10. The larger the number you set, the higher the speed.

**Time/Speed**
Set whether to specify the duration of a transition by time or by speed of zoom transition.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Contents</th>
</tr>
</thead>
<tbody>
<tr>
<td>Time</td>
<td>The “Transition Time” setting is valid.</td>

**Start Timer**
Set the time from start of recording to start of the shot transition. The countdown indication is displayed in the shot-transition information area until the shot transition is started by the Start Timer.

**Rec Link**
Set whether to link shot-transition start and target shot selection to recording start. The setting status is displayed in the shot transition information area.
**Shot Transition**

**Off:** Not to link to recording start  
(To use the A or B button to start the transition and specify the target shot)  
**Shot-A:** To start the transition to Shot A in synchronization with recording start  
**Shot-B:** To start the transition to Shot B in synchronization with recording start

3 Exit the menu to finish the settings.

---

**Registering a shot**

You can register two kinds of shots: A and B.

1 Press the MODE button to display “Store” in the shot-transition operation area.

2 Adjust the camera settings to obtain an image you wish to register.

3 When adjustment is finished, press the Shot A or Shot B button.

The camera settings are registered to the pressed button.  
The registered camera settings are maintained until you register them next.

---

**Checking the Registered Settings (Shot)**

1 Press the MODE button to display “Check” in the shot-transition operation area.

2 Press the A or B button, whichever you assigned to the shot you wish to check.

The selected shot (camera settings or conditions) takes effect on the picture on the screen.  
With this operation, you cannot check the conditions of the transition.

---

**Recording with a Shot Transition**

When the preparatory settings are completed, you can start recording.  
Operations differ depending the “Rec Link” setting.

---

**Making a transition from the current picture to a registered shot**

1 Adjust the camera settings to obtain an image with which you wish to start recording.

2 Press the MODE button to display “Execute” in the shot-transition operation area.

3 Press the REC START/STOP button.  
Recording begins.

4 When “Rec Link” is “Off,” press the button of the target shot (A or B) when you wish to start the shot transition.  
The current camera settings are gradually shifted to those registered to the specified shot.  
When “Rec Link” is “Shot-A” or “Shot-B,” the camcorder automatically performs the shot transition to the camera settings registered to Shot A or Shot B, respectively.  
You need not press the button.

**Notes**

- You cannot return to the status in step 1 once after you start the shot transition. If the status must be resumed, register it as a shot.

- When you perform recording on an external device connected via the i.LINK(HDV) connector in synchronization with REC START/STOP operations on this camcorder, recording start on the external device and shot-transition start may not be synchronized even if “Rec Link” has been set to “Shot-A” or “Shot-B,” depending on the performance of the external device.

---

**Making a transition from Shot A to Shot B**

When “Rec Link” is set to “Off” or “Shot-B,” a shot transition from Shot A to Shot B is possible.

1 Press the MODE button to display “Check” in the shot-transition operation area.

2 Press the A button.  
The picture is adjusted according to the camera settings registered for Shot A.
3 Press the MODE button to display “Execute” in the shot-transition operation area.

4 Press the REC START/STOP button. Recording begins with the camera settings registered for Shot A.

5 When “Rec Link” is “Off,” press the B button when you wish to start the shot transition.
   When “Rec Link” is “Shot-B,” the camcorder automatically performs the shot transition to the camera settings registered for Shot B. It is not necessary to press the B button.

Making a transition from Shot B to Shot A
When “Rec Link” is set to “Off” or “Shot-A,” a shot transition from Shot B to Shot A is possible.

1 Press the MODE button to display “Check” in the shot-transition operation area.

2 Press the B button.
   The picture is adjusted according to the camera settings registered for Shot B.

3 Press the MODE button to display “Execute” in the shot-transition operation area.

4 Press the REC START/STOP button. Recording begins with the camera settings registered for Shot B.

5 When “Rec Link” is “Off,” press the A button when you wish to start the shot transition.
   When “Rec Link” is “Shot-A,” the camcorder automatically performs the shot transition to the camera settings registered for Shot A. It is not necessary to press the A button.

Ending recording
When recording is completed, press the REC START/STOP button.

To cancel recording while a transition is in progress
If you press the REC START/STOP button during recording, the recording stops, even when a shot transition is in progress. The E-E picture of the settings where the recording stops is displayed.

Releasing a Shot Transition
Press the MODE button so that the button indicator goes dark. The LCD monitor/EVF screen resumes the normal condition.
Using the Fader function, you can start a recording by fading in a scene or end a recording by fading out of a scene. The fader function can be assigned to an assignable button.

For function assignment, see “Changing Functions of the Assignable Buttons” on page 56.

Notes
- The fader function cannot be used in combination with the Slow & Quick Motion, Interval Recording, Frame Recording, or EX Slow Shutter function.
- When a clip is recorded using the fade-in function, a white or black screen becomes the index frame on the thumbnail screen (page 77). Change the index frame for easier identification.
- When you perform recording on an external device connected via the i.LINK(HDV) connector in synchronization with REC START/STOP operations on this camcorder, recording start/stop on the external device and fade-in start/fade-out end may not be synchronized, depending on the performance of the external device.

Preparatory Settings
Specify the conditions to activate the Fader function in advance with the following procedure:

1. Select “Fader” of the CAMERA SET menu.

2. Specify the fade-in conditions.

3. Specify the fade-out conditions.

4. Exit the menu.

- If you set “Fade In” to “On” with the menu, the camcorder enters Fade-in standby status when you exit the menu.
- When the Fader indication on the screen is active, the initial status (“White Fader” or “Black Fader”) you set with “Fade In Type” flashes.

When using an assignable button
If you assigned the Fader function to an assignable button, the Fade In/Fade Out On/Off settings can be made using the button.
For fading in a scene
Press the ASSIGN button to which you assigned the Fader function in STBY (recording standby) status.
The fade-in function is turned on.

For fading out
Press the ASSIGN button to which you assigned the Fader function during recording.
The camcorder enters in the fade-out standby status.

Starting Recording with a Fade In
When the preparatory settings are completed, you can start recording.
Press the REC START/STOP button.
Recording begins by fading in the camera picture.

When the fade-in process you specified is completed, the camcorder enters Normal Recording mode.
The Fade-In Type indication flashes during the fade-in process and goes off when the process ends.

Ending Recording with a Fade Out
• If you set “Fade Out” to “On” with the menu, the camcorder automatically enters Fade-out standby status when it is set to Recording mode.
• When you press the ASSIGN button to which you assigned the Fader function after starting recording, the camcorder enters fade-out standby status.

Press the REC START/STOP button to start fading out of the camera picture.
The fading-out process begins.

When the fading-out process you specified is completed, recording simultaneously stops.
The Fade-Out Type indication flashes during the fade-out process and goes off when the process ends.

Canceling the Fader function
Set “Fade In” and “Fade Out” with the menu.
Or press the ASSIGN button again.

Note
The Fade In/Fade Out settings automatically return to “Off” when you turn off the camcorder, while the Type and Time settings set with the menu are maintained.
You can customize the picture quality, depending on the conditions or circumstances of recording, and store them as a picture profile, enabling the picture quality to be resumed just by your selecting the picture profile. Six different picture profiles (PP1 to PP6) can be stored in memory. The same standard (reference) values are registered to six picture profiles at the factory as those specified for the Picture Profile Off status. The PICTURE PROFILE menu is available for picture-profile operations.

**Note**

The picture profiles can be operated only in Camera mode. They cannot be operated in Media mode.

### Registering the Customized Settings as a Picture Profile

1. Set the power switch to CAMERA to turn the camcorder on in Camera mode.
2. Press the PICTURE PROFILE button. The PICTURE PROFILE menu is displayed.
3. Operating the jog dial or the joystick, select “SEL” from the PICTURE PROFILE menu then select the picture profile number (PP1 to PP6) to operate.

4. Operating the jog dial or the joystick, select “SET” and make the settings of the picture profile items.

5. When the settings are completed, press the PICTURE PROFILE button to exit the menu.

### Selecting a Picture Profile

#### Selecting a Picture Profile using the PICTURE PROFILE menu

Once you store a picture profile, you can call the picture quality registered in the picture profile as follows:

1. Set the power switch to CAMERA to turn the camcorder on in Camera mode.
2. Press the PICTURE PROFILE button. The PICTURE PROFILE menu is displayed.
3. Operating the jog dial or the joystick, select “SEL” then the desired picture profile from the list.

For details on the setting items, see “Picture Profile Items” on page 71.
The camcorder is adjusted to the picture quality specified by the selected Profile. (If you select “OFF,” the camcorder will be fixed at the standard picture quality, and no picture adjustment is allowed.)

4 Press the PICTURE PROFILE button to exit the menu.

Selecting a Picture Profile using the Direct menu

The picture profile being selected is displayed when you press the DISPLAY/BATT INFO button.

You can select picture profiles with the Direct menu by operating the joystick or the jog dial.

For details on the Direct menu, see “Direct Menu Operation” on page 19.

Copying the Settings of a Picture Profile

You can copy the settings of a selected picture profile to another picture profile.

1 Select the source picture profile by proceeding from step 1 to 3 of “Selecting a Picture Profile using the PICTURE PROFILE menu” on page 69.

2 Select “Copy” from “SET” of the PICTURE PROFILE menu.

   The picture profile numbers are listed on the screen.

3 Specify the target picture profile.

   “Execute” and “Cancel” are displayed.

4 Select “Execute.”

   Copying begins.

   When copying ends, the completion message is displayed for three seconds, and the original screen display is restored.

Resetting a Picture Profile

You can reset a selected picture profile to the factory settings (standard status).

1 Select the picture profile you wish to reset by proceeding from step 1 to 3 of “Selecting a Picture Profile using the PICTURE PROFILE menu” on page 69.

2 Select “Reset” from “SET” of the PICTURE PROFILE menu.

   “Execute” and “Cancel” are displayed.

3 Select “Execute.”

   Resetting begins.

   When resetting ends, the completion message is displayed for three seconds, and the original screen display is restored.
The values when “Off” is selected at “SEL” of the PICTURE PROFILE menu are shown in bold face (example: Standard).

### Picture Profile Items

The values when “Off” is selected at “SEL” of the PICTURE PROFILE menu are shown in bold face (example: Standard).

</tbody>
</table>
To execute “Area Detection”

1. Select “Area Detection.”
   A square marker that indicates the detection area appears in the center of the screen, and “Execute” and “Cancel” are displayed below.

2. Select “Execute.”
   Color-phase detection in the marker area is performed.
   When detection successfully ends, a completion message is displayed. Then the screen is restored, on which the target area for the Color Correction or Skin Tone Detail adjustment is changed to the area centering around the color detected by “Area Detection,” and the Area Indication (zebra pattern) appears.
   If detection fails, an error message appears, then the precious screen is restored.

The Area Indication setting is common to all picture profiles PP1 to PP6.

1/To execute “Area Detection”

2) The Area Indication setting is common to all picture profiles PP1 to PP6.

Available gamma curves

STD1: This deemphasizes the contrast in dark areas more than STD2 and emphasizes the contrast in intermediate areas.

STD2: This deemphasizes the contrast in dark areas more than STD3.

STD3: Standard (factory setting)

STD4: This emphasizes the contrast in dark areas more than STD3.

CINE1: This smooths the contrast in darker areas and accentuates gradation changes in brighter areas, for a calm and quiet effect.

CINE2: This gives almost the same results as CINE1. Select this when you wish to obtain 100% video signals for editing or other purposes.

CINE3: This emphasizes the contrast between light and dark more than CINE1 and CINE2, and also accentuates gradation changes on the black side.

CINE4: This emphasizes the contrast in dark areas more than CINE3. Contrast in dark areas is weaker and contrast in bright areas is stronger than STD curves.
Deleting Clips

In Camera mode, the Last Clip DEL function for deleting the last recorded clip and the All Clips DEL function for deleting all clips from a memory card are available.

In Media mode, you can specify the clip to be deleted.

*For clip deletion in Media mode, see “Deleting a Clip” on page 84.

Deleting the Last Recorded Clip

Using the assignable button to which you assigned the Last Clip DEL function or the Setup menu, the last recorded clip is easily deleted.

**To delete using the assignable button**

Assign the Last Clip DEL function to one of the assignable buttons (see page 56) in advance.

1. **Press the assignable button to which you have assigned “Last Clip DEL.”**
   The confirmation message is displayed.

2. **Operating the joystick or the jog dial, select “Execute.”**
   The last recorded clip is deleted from the memory card.

**To delete using the Setup menu**

1. **Select “Last Clip DEL” from “Clip” of the OTHERS menu.**

2. **Select “Execute.”**
   The confirmation message is displayed.

3. **Select “Execute” again.**
   The last recorded clip is deleted from the memory card.

*For details on menu operations, see “Basic Menu Operations” on page 94.

Deleting All Clips

Using the Setup menu, you can delete all recorded clips from the memory card in the selected card slot.

1. **Select “All Clips DEL” from “Clip” of the OTHERS menu.**

2. **Select “Execute.”**
   The confirmation message is displayed.

3. **Select “Execute” again.**
   All the clips are deleted from the memory card.

**Note**

Clips with the OK mark applied cannot be deleted.

*For details on the OK mark, see “Adding the OK Mark to a Clip” on page 83.

Deleting Items

Deleting Files

Deleting the Last Recorded Clip

Using the assignable button to which you assigned the Last Clip DEL function or the Setup menu, the last recorded clip is easily deleted.

**To delete using the assignable button**

Assign the Last Clip DEL function to one of the assignable buttons (see page 56) in advance.

1. **Press the assignable button to which you have assigned “Last Clip DEL.”**
   The confirmation message is displayed.

2. **Operating the joystick or the jog dial, select “Execute.”**
   The last recorded clip is deleted from the memory card.

**To delete using the Setup menu**

1. **Select “Last Clip DEL” from “Clip” of the OTHERS menu.**

2. **Select “Execute.”**
   The confirmation message is displayed.

3. **Select “Execute” again.**
   The last recorded clip is deleted from the memory card.

*For details on menu operations, see “Basic Menu Operations” on page 94.

Deleting All Clips

Using the Setup menu, you can delete all recorded clips from the memory card in the selected card slot.

1. **Select “All Clips DEL” from “Clip” of the OTHERS menu.**

2. **Select “Execute.”**
   The confirmation message is displayed.

3. **Select “Execute” again.**
   All the clips are deleted from the memory card.

**Note**

Clips with the OK mark applied cannot be deleted.

*For details on the OK mark, see “Adding the OK Mark to a Clip” on page 83.
Storing/Retrieving the Setting Data

You can store all the menu settings (including picture profiles) as a setup file on an SxS memory card. By retrieving the stored setup file, the proper setup condition can be immediately obtained. For the setup file operations, use “Camera Data” of the OTHERS menu.

Note
The Clock Set, Time Zone, Hours Meter (page 107) values are excluded.

Storing the Setup File

Only one setup file can be stored on one SxS memory card.

1 Insert a memory card on which you wish to store the setup file to a card slot.
Check that the corresponding memory card icon is displayed on the screen. If a memory card in the other slot is selected, press the SLOT SELECT button to switch.

2 Select “Camera Data” from the OTHERS menu.

3 Select “Store.”
“Cancel” and “Execute” appear to the right.

4 Select “Execute.”
Writing of data to the memory card begins.

Notes
• If a setup file already exists on the memory card you specified in Step 1, a message to confirm whether to overwrite the file is displayed.
• If there is not sufficient space on the memory card, an error message is displayed.

Retrieving the Setup File

When you retrieve the stored setup file, the camcorder settings are changed according to the file.

1 Insert the memory card on which you stored the setup file into a card slot.
Check that the corresponding memory card icon is displayed on the screen. If a memory card in the other slot is selected, press the SLOT SELECT button to switch.

2 Select “Camera Data” from the OTHERS menu.

3 Select “Recall.”
“Cancel” and “Execute” appear to the right.

4 Select “Execute.”
Reading of data from the memory card begins.

An in-progress message is displayed during data reading. When the read-out is completed, a completion message is displayed, indicating that the camcorder settings have been changed according to the setup file.

Resetting to the Standard Values

The current camcorder settings you made through various menu and button operations can be collectively returned to the standard statuses (factory settings) by executing “All Reset” of the OTHERS menu.

Time Zone: UTC +09:00
Clock Set
Language: English
Playing Back Clips

Turning the camcorder on with the power switch set to MEDIA sets it to Media mode, and the clips recorded on the SxS memory card are displayed as thumbnails on the screen. (If no clips are recorded on the card, a no-clip message is displayed.)

You can start playback from the clip selected on the thumbnail screen. The playback picture can be seen on the LCD monitor/EVF and external monitors.

For connection of external monitors, see “Connecting External Monitors” on page 109.

Thumbnail Screen

The index frame images of the clips on the SxS memory card are displayed as thumbnails. The recording date and starting time are displayed below the index image of each clip. (The OK mark symbol is displayed if the clip is marked.)

Clip index frame

The first frame is automatically specified as the index frame of a clip when recorded. You can change it to another one as required (see page 87).

Data for the clip at the cursor are displayed in 1 to 8.

1. **Date and starting time of recording**
2. **Clip name**
3. **OK mark**
   Displayed only if the selected clip is marked OK (page 83).
4. **AV independent file icon**
   Displayed if the selected clip is an AV independent file. This indicates that the clip is an AV independent file, such as those added to the memory card using a computer. Not all operations and indications may be available for such clips.
5. **Recording video format**
6. **Duration of the clip**
7. **Timecode**
   The timecode of the index frame is displayed.
8. **Special recording information**

If the selected clip was recorded in a special recording mode (S&Q Motion, Interval Rec, or Frame Rec), the mode is displayed.

For a clip recorded in S&Q Motion mode, [recording frame rate/playback frame rate] fps is displayed to the right.

---

### Switching the SxS memory cards

When two memory cards are loaded, press the SLOT SELECT button to switch memory cards.

**Note**

In Media mode, card switching is enabled only when the thumbnail screen is displayed or when an external input picture is displayed by pressing the STOP button.

You cannot switch memory cards during playback.

---

### Displaying only the clips marked OK on the thumbnail screen

Press the THUMBNAIL button.

The thumbnail screen changes such that it contains only the clips marked OK among the clips on the current memory card. To return to the thumbnail screen with all the clips, press the THUMBNAIL button again.

*For operations of the OK mark, see “Adding the OK Mark to a Clip” on page 83.*

---

**Playback**

For playback operations, use the playback control buttons on the handle.

- When the IR Remote Commander is enabled, you can use its playback control buttons instead *(see page 27).*
- Functions of the playback control buttons are occasionally assigned to the joystick *(see page 79).*
- The jog dial is also valid when you move the cursor on the thumbnail screen or proceed to the next step of operations.

---

#### Playing back the selected and subsequent clips in sequence

1. **Operating the joystick or jog dial, move the cursor to the thumbnail image of the clip with which you wish to start playback.**

2. **Press the PLAY/PAUSE button.**

Playback starts from the beginning of the selected clip.

The clips after the selected clips are played back in sequence.

When playback of the last clip ends, the camcorder enters PAUSE (still picture) mode at the last frame of the last clip.
Press the THUMBNAIL button to return to the thumbnail screen.

**Notes**

- The playback picture may be momentarily distorted or frozen between clips. The playback control buttons and THUMBNAIL button do not function during this condition.
- When you select a clip on the thumbnail button and start playback, the playback picture at the beginning of the clip may be distorted. To start playback without distortion, once pause playback after starting it, press the PREV button to return to the top of the clip, then restart playback.

**Information displayed on the playback screen**

The following information is superimposed on the playback picture.

| 1. Battery remaining/DC IN voltage
| 2. Playback mode
| 3. SxS memory card in use |
| 4. Time data |
| 5. Clip no./total number of clips on the memory card |
| 6. Joystick operation guidance area |

**Display example (Playback mode):**

</tbody>
</table>

**7. Audio levels**

The audio levels in recording are displayed.

**Pausing the playback**

Press the PLAY/PAUSE button.

The playback is restarted by pressing the button again.

**Switching to high-speed playback**

The camcorder permits you to play clips at 4 times or 15 times normal speed in the forward or reverse direction. Audio is muffled in high-speed playback.

**To play at a high speed in the forward direction**

Press the F FWD button.

Each time you press the button, the playback speed switches between 4 times and 15 times normal speed.

**To play at a high speed in the reverse direction**

Press the F REV button.

Each time you press the button, the playback speed switches between 4 times and 15 times normal speed.

**To return to normal playback**

Press the PLAY/PAUSE button.
Cueing up

To return to the top of the current clip
Press the PREV button.
- When you press the button in normal or fast-forward playback, the top of the current clip is cued up then playback begins.
- When you press the button in fast-reverse playback or in Pause mode, the top of the current clip is cued up, then the still picture is displayed.
- Repeated pressing of the button cues up the previous clips one by one.

To start playback from the top of the first clip
Press the PREV button and F REV button simultaneously. The top of the first-recorded clip on the memory card is cued up.

To jump to the top of the next clip
Press the NEXT button.
- When you press the button in normal or fast-forward playback, the top of the next clip is cued up then playback begins.
- When you press the button in fast-reverse playback or in Pause mode, the top of the next clip is cued up, then the still picture is displayed.
- Repeated pressing of the button cues up the subsequent clips one by one.

To start playback from the top of the last clip
Press the F FWD button and NEXT button simultaneously. The top of the last-recorded clip on the memory card is cued up.

Monitoring audio

In Normal playback mode, you can monitor the recorded audio signals through the built-in speaker or connected headphones.

With the headphones connected to the headphone jack, the built-in speaker is turned off.
Press the MONITOR VOL buttons to adjust the sound volume.
The level bar is displayed during adjustment.
You can select audio channel(s) to be monitored with “Audio Output” (page 101) of the AUDIO SET menu.

Adding shot marks during playback

In the same manner as in recording, you can add shot marks to the clip during playback.

At the point where you wish to add a shot mark, press the “Shot Mark1” or “Shot Mark2” assigned button, or the SHOTMARK 1 or 2 button on the IR Remote Commander.

Notes
- No shot mark can be added if the memory card is write-protected.
- No shot mark can be added to the first or last frame of a clip.

Stopping playback

You can stop playback with either of the following operations:

Press the THUMBNAIL button.
Playback mode is canceled, restoring the thumbnail screen.

Press the STOP button.
Playback mode is canceled, showing any external input or a blue screen.
To display the thumbnail screen, press the THUMBNAIL button.
Clip Operations

In Media mode, you can operate the clips or confirm and change the subsidiary data for clips using the Clip Operation menus. The corresponding Clip Operation menu pops up on the screens as shown below.

Basic Operations of the Clip Operation Menus

Displaying a Clip Operation menu

Press the joystick or the jog dial. The Clip Operation menu for the current display pops up.

Selecting a Clip Operation menu item

Turn the jog dial or tilt the joystick to select a menu item then press the jog dial or the joystick. Pressing the CANCEL button restores the previous condition. Selecting “CANCEL” from a Clip Operation menu turns the Clip Operation menu off.

Notes

- When the SxS memory card is write-protected, you cannot copy/delete/divide clips, change the index frames, and add/delete the OK and shot marks.
- There may be items that cannot be selected depending on the status when the menu is displayed.

Clip Operation menu on the thumbnail screen

Pressing the joystick or the jog dial with the thumbnail screen (page 77) displayed calls the Clip Operation menu for the clip at the cursor.

<table>
<thead>

Displaying the Detailed Information of a Clip

When you select “DISP CLIP INFO” from a Clip Operation menu, the CLIP INFO screen appears.

1. Image of the current clip
2. Image of the previous clip
   Press the PREV button to switch to the CLIP INFO screen of the previous clip.
3. Image of the next clip
   Press the NEXT button to switch to the CLIP INFO screen of the next clip.
4. Clip name
5. OK mark
   Displayed only when the selected clip is marked OK.
6. Date and starting time of recording
7. Recording format
8. Special recording information
   If the selected clip was recorded in a special recording mode (S&Q Motion, Interval Rec, or Frame Rec), the mode is displayed. For a clip recorded in S&Q Motion mode, [recording frame rate/playback frame rate] fps is displayed to the right.
9. Timecode of the displayed frame
10. Timecode at the recording starting point
11. Timecode at the recording ending point
12. Duration of the clip
13. Recorded audio channels

Adding the OK Mark to a Clip

By adding the OK mark to clips, you can obtain a thumbnail screen of only the marked clips when you press the THUMBNAIL button. Clips with the OK mark cannot be deleted or divided. To delete or divide the clip, remove the OK mark.

Adding the OK mark

1. Select “OK MARK ADD” from the Clip Operation menu.

   The CLIP INFO screen for the clip appears and a confirmation message appears below the index frame.

2. Select “Execute,” and press the jog dial or the joystick.

   The OK mark is applied to the selected clip.

Deleting the OK mark

For a clip already marked with OK, the Clip Operation menu of the thumbnail screen permits you to select “OK MARK DEL.”
1 Select “OK MARK DEL” from the Clip Operation menu.
The information screen for the selected clip appears, and a confirmation message is displayed below the index frame image.

2 To delete, select “Execute” then press the jog dial or the joystick.
The OK mark is deleted from the selected clip.

## Copying a Clip

You can copy a clip selected on the thumbnail screen to another SxS memory card.

1 On the thumbnail screen of the current memory card, select the clip you wish to copy then press the joystick or the jog dial.
The Clip Operation menu of the thumbnail screen pops up.

2 Select “COPY CLIP” from the Clip Operation menu.
The information screen of the selected clip appears, and a confirmation message is displayed below the index frame image.

3 To copy, select “Execute” then press the jog dial or the joystick.
Copying begins.

The clip is copied with the same name to the destination SxS memory card.
An execution message and an in-progress bar are displayed during copying.
When copying ends, the thumbnail screen is restored.

### Notes
- If there is another clip having the same name on the destination SxS memory card, the clip is copied under a name adding a single-digit number in parentheses to the end of the original clip name.
The parenthetical number is the minimum value that does not exist in the destination memory card.

#### Examples:
- ABCD0002(1) if ABCD0002 exists
- ABCD0002(2) if ABCD0002(1) exists
- ABCD0005(4) if ABCD0005(3) exists
- If parenthetical numbers (1) to (9) already exist as the result of repeated copying, copying to that card cannot be done any more.
- A warning message is displayed if there is not sufficient space on the destination SxS memory card. Replace the SxS memory card with one with sufficient space.

### To cancel copying on the way
Press the CANCEL button.
Copying is canceled and the thumbnail screen is restored.

## Deleting a Clip

You can delete a clip selected on the thumbnail screen from the SxS memory card.

1 Select the clip you wish to delete on the thumbnail screen then press the joystick or the jog dial.
The Clip Operation menu of the thumbnail screen pops up.

2 Select “DELETE CLIP” from the Clip Operation menu.
The information screen for the selected clip appears, and a confirmation message is displayed below the index frame image.

3 To delete, select “Execute” then press the jog dial or the joystick.
The clip is deleted.

The subsequent clips are shifted by one on the thumbnail screen.

## Displaying the EXPAND CLIP Screen

The EXPAND CLIP screen permits you to divide a clip into 12 blocks of equal duration and show a thumbnail image of the first frame of each block on the screen.
This helps you to quickly cue up to a desired scene in a clip of long duration.
You can display the EXPAND CLIP screen by selecting the clip on the thumbnail screen or on the still picture of the clip in Pause mode.
1. **Pause the playback or select a clip on the thumbnail screen then press the joystick or the jog dial.**

The corresponding Clip Operation menu pops up.

2. **Select “EXPAND CLIP” from the Clip Operation menu.**

The EXPAND CLIP screen appears for the clip in Pause mode or that you selected on the thumbnail screen.

On the EXPAND CLIP screen displayed by using the Clip Operation menu in Pause mode, the clip is displayed with the finest possible partitions.

**EXPAND CLIP screen**

![Current frame number](image)

Detailed information for the clip is displayed at the bottom of the screen.

The items other than the following are the same as those on the normal thumbnail screen:

1. **Frame information**

   The following icons show the marking for the frame at the cursor.

   - ![Index frame](image)
   - ![Frame with shot mark 1 added](image)
   - ![Frame with shot mark 2 added](image)

   The same icons may also be displayed below the thumbnail image of each frame. If the frame has multiple markings, one of the icons is displayed, in the priority order of index frame, shot mark 1, and shot mark 2.

2. **Timecode indication**

   The timecode of the frame at the cursor is displayed.

### Clip Operation menu on the EXPAND CLIP screen

When you select a frame on the EXPAND CLIP screen and press the joystick or the jog dial, the Clip Operation menu pops up to enable further operations.

<table>
<thead>
<tr>
<th>Item</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>EXPAND (COARSE)</td>
<td>To decrease the number of partitions of the clip</td>
</tr>
<tr>
<td>EXPAND (FINE)</td>

<td>To set to Pause mode at the selected frame</td>
</tr>
<tr>
<td>SET INDEX PIC</td>
<td>To specify the selected frame for the index frame of the clip (page 87)</td>
</tr>
<tr>
<td>SHOT MARK1 ADD</td>
<td>To add shot mark 1 to the selected frame (page 86)</td>
</tr>
<tr>
<td>SHOT MARK2 ADD</td>
<td>To add shot mark 2 to the selected frame (page 86)</td>
</tr>
<tr>
<td>SHOT MARK1 DEL</td>
<td>To delete shot mark 1 from the selected frame (page 86)</td>
</tr>
<tr>
<td>SHOT MARK2 DEL</td>
<td>To delete shot mark 2 from the selected frame (page 86)</td>
</tr>
<tr>
<td>DIVIDE CLIP</td>
<td>To divide the clip into two clips at the selected frame (page 87)</td>
</tr>
</tbody>
</table>

### Displaying the SHOT MARK Screen

When one or more shot marks are recorded for a single clip, the SHOT MARK screen permits you to display only the marked frames as the thumbnail images on the screen.

1. **Select a clip on the thumbnail screen.**

2. **Press the joystick or the jog dial.**

   The Clip Operation menu pops up.

3. **Select “SHOT MARK,” “SHOT MARK1,” or “SHOT MARK2.”**

   **SHOT MARK:** To display thumbnails only of the frames marked with shot mark 1 and/or shot mark 2 recorded

   **SHOT MARK1:** To display thumbnails only of the frames marked with shot mark 1
SHOT MARK2: To display thumbnails only of the frames marked with shot mark 2

SHOT MARK screen example

The detailed information of the clip is displayed at the bottom of the screen.
The items other than the following are the same as those on the EXPAND CLIP screen:
1. Timecode indication
   The timecode of the frame at the cursor on the SHOT MARK screen is displayed.

Clip Operation menu on the SHOT MARK screen

When you select a frame on the SHOT MARK screen and press the joystick or the jog dial, the Clip Operation menu pops up to permit you further operations.

<table>
<thead>
<tr>
<th>Item</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>PAUSE</td>
<td>To set to Pause mode at the selected frame</td>
</tr>
<tr>
<td>SET INDEX PIC</td>
<td>To specify the selected frame for the index frame of the clip (page 87)</td>
</tr>
<tr>
<td>SHOT MARK1 DEL</td>
<td>To delete the shot mark 1 from the selected frame (page 86)</td>
</tr>
<tr>
<td>SHOT MARK2 DEL</td>
<td>To delete the shot mark 2 from the selected frame (page 86)</td>
</tr>
<tr>
<td>DIVIDE CLIP</td>
<td>To divide the clip into two clips at the selected frame (page 87)</td>
</tr>
</tbody>
</table>

Adding/Deleting Shot Marks

You can add shot marks to the clips after recording or delete the recorded shot marks.

Adding a shot mark in Pause mode

1. Pause the playback at the frame to which you wish to add a shot mark then press the joystick or the jog dial.
   The Clip Operation menu pops up.

2. Select “SHOT MARK1 ADD” or “SHOT MARK2 ADD” from the Clip Operation menu.
   The information screen for the selected frame appears, and a confirmation message is displayed below the image.

3. Select “Execute.”

Adding a shot mark on the EXPAND CLIP screen

1. Select the frame to which you wish to add a shot mark on the EXPAND CLIP screen then press the joystick or the jog dial.
   The Clip Operation menu pops up.

2. Select “SHOT MARK1 ADD” or “SHOT MARK2 ADD” from the Clip Operation menu.
   The information screen for the selected frame appears, and a confirmation message is displayed below the image.

3. Select “Execute.”

Deleting a shot mark

You can delete shot marks on the EXPAND CLIP screen (page 84) or on the SHOT MARK screen (page 85).

1. Select a frame from which you wish to delete the shot mark on the EXPAND CLIP screen or the SHOT MARK screen then press the joystick or the jog dial.
   The Clip Operation menu pops up.

2. Select the “SHOT MARK1 DEL” or “SHOT MARK2 DEL” from the Clip Operation menu.
The information screen for the selected frame appears and a confirmation message is displayed below the image.

3 Select “Execute.”

Changing the Index Frame

You can change the index frame of a clip to another frame you selected on the EXPAND CLIP screen (page 84) or the SHOT MARK screen (page 85).

1 Select a frame to be the index frame on the EXPAND CLIP screen or the SHOT MARK screen then press the joystick or the jog dial.

2 Select “SET INDEX PIC” from the Clip Operation menu.
   The information screen of the selected frame appears and the confirmation message is displayed below the image.

3 Select “Execute.”

   Note
   Even if you specify a frame other than the top frame for the index frame, playback always begins from the top frame when you start it from the thumbnail screen.

Dividing a Clip

You can divide a clip into two different clips at the frame you select on the EXPAND CLIP screen (page 84) or the SHOT MARK screen (page 85).

1 Select the frame at which the clip is to be divided on the EXPAND CLIP screen or the SHOT MARK screen then press the joystick or the jog dial.
   The Clip Operation menu pops up.

2 Select “DIVIDE CLIP” from the Clip Operation menu.
   The information screen for the selected frame appears, and a confirmation message is displayed below the image.

3 Select “Execute.”
   The selected and subsequent frames are divided, creating two clips having different names.

   Note
   Even if you specify a frame other than the top frame for the index frame, playback always begins from the top frame when you start it from the thumbnail screen.

   Example: If you divide a clip named ABCD0002 into two clips under the condition where a new clip will be named EFGH0100, clip ABCD0100 and clip ABCD0101 are created.

   Note
   If the remaining space on the memory card is insufficient for divided clips, a message informing you of it appears.
This camcorder provides status screens of five kinds in Camera mode and four kinds in Media mode, permitting you to check the various settings and statuses of this unit. The status screens can also be displayed on an external monitor.

*For connections of an external monitor, see “Connecting External Monitors” on page 109.*

### Available status screens

- **CAMERA status screen** (displayed only in Camera mode) *(page 89)*
- **AUDIO status screen** *(page 90)*
- **VIDEO status screen** *(page 91)*
- **BUTTON/REMOTE status screen** *(page 91)*
- **BATTERY/MEDIA status screen** *(page 92)*

### Activating the status screen display

Press the **STATUS button**.

### Switching the status screens

Operating the joystick or the jog dial switches the screens in sequence.

### Canceling the status screen display

Press the **STATUS button** again. The status screen display is canceled.
CAMERA Status Screen

The settings and statuses related to image shooting are displayed.
The CAMERA status screen is obtained only in Camera mode. It is not displayed in Media mode.

### White Bal: White balance status

<table>
<thead>
<tr>

<td>This indication becomes “On” if you turn zebra on with the ZEBRA button when “2” or “Both” is selected for “Zebra Select” of the LCD/VF SET menu. It shows “Off” when zebra is off or “1” is selected for “Zebra Select.”</td>
</tr>
</tbody>
</table>

### Skin Tone Detail: Skin-tone detail status

The current status (On or Off) of “Setting” of “Skin Tone Detail” of the PICTURE PROFILE menu is displayed.

### Picture Profile: Picture Profile selection status

The selected Picture Profile number and name are displayed. (If Picture Profile is off, “Off” is displayed.)
Information regarding audio signals is displayed. The display configuration varies between Camera mode and Media mode.

**In Camera Mode**

**CH-1/CH-2: Audio level meters**
The levels of the CH-1 and CH-2 audio inputs (E-E audio levels) are displayed.

**Wind Filter: Wind filter settings**
The current settings of “Wind Filter CH-1” and “Wind Filter CH-2” of the AUDIO SET menu are displayed.

**AGC Link: AGC link status**
The “AGC Link” status (Linked or Separate) of the AUDIO SET menu is displayed.

**INT/EXT–CH-1/CH-2: Audio input settings**
The inputs to CH-1 and CH-2 according to the “EXT CH Select” setting of the AUDIO SET menu and the AUDIO IN switch status are displayed.

<table>
<thead>
<tr>
<th>AUDIO IN switch</th>

**Output CH**: Output channel setting
The “Output CH” setting of the AUDIO SET menu is displayed.

**Headphones**: Headphone output
The output audio channel(s) for the headphones is(are) displayed. The “Monitor CH” setting of the AUDIO SET menu is valid as-is.

**Speaker**: Speaker output
The output audio channel(s) for the built-in speaker is(are) displayed. As the speaker is monaural, the outputs are CH-1+CH2 or CH-3+CH4 even in stereo mode. With nonstereo settings, the “Monitor CH” setting of the AUDIO SET menu is valid as-is.
The information on video formats and settings for the COMPONENT OUT, SDI OUT, A/V OUT, i.LINK connectors is displayed.

**Video Format: Video format setting**
The picture size (effective vertical lines), frame rate, and scan format set in “Video Format” of the OTHERS menu are displayed.

**Rec Mode: Recording bit rate**
The bit rate (HQ or SP) set in “Video Format” of the OTHERS menu is displayed.

**YPbPr/SDI Out: Component and SDI output status**
The picture size (effective vertical lines), frame rate, and scan format of the signal being fed from the COMPONENT OUT and SDI OUT connectors according to the “YPbPr/SDI Out Select” setting of the VIDEO SET menu are displayed.

**Video Out: Output status of the A/V OUT connector**
“Off” is displayed when “YPbPr/SDI Out Select” of the VIDEO SET menu is set to “HD” or “SD.” The format (NTSC or PAL) of the analog composite signal being fed from the A/V OUT connector is displayed when “YPbPr/SDI Out Select” of the VIDEO SET menu is set to “Off.”

**Down Converter: Down-converter setting of the SD output**
The “Down Converter” setting (Squeeze, Edge Crop, Letterbox) of the VIDEO SET menu is displayed.

**i.LINK I/O: i.LINK I/O status**
The i.LINK I/O setting (Enable /Disable) of the OTHERS menu is displayed.

The functions assigned to the assignable buttons and the status of the IR Remote Commander are displayed.

**Assign Button: Assignable button statuses**
The functions assigned with the “Assign Button” of the OTHERS menu to the respective assignable buttons are displayed.

**IR Remote: IR Remote Commander status**
The status (On: enabled, Off: disabled) of the IR Remote Commander is displayed.
BATTERY/MEDIA Status Screen

The information on the battery pack and SxS memory cards is displayed.

<table>
<thead>
<tr>
<th>Battery</th>
<th>Charge Count</th>
<th>Media A</th>
<th>Media B</th>

<td>![Media Icon]</td>
<td>![Media Icon]</td>
</tr>
</tbody>
</table>

**Battery: Battery charge remaining**
The remaining charge level of the mounted battery pack is displayed.

**Charge Count: Repeated charge times**
The number of times that the mounted battery pack has been charged is displayed.

**Media A/Media B: Remaining space and available recording time**
The remaining space of the SxS memory cards in the respective card slots are indicated on the meters.
At the right, the available time for recording if done at the current bit rate is displayed, in minutes.
The time indication will be “- - min” if no SxS memory card or an invalid card is in the slot.
If the card is write-protected, “Protected” is shown to the right of the time indication.
This camcorder permits you to make various settings for recording and playback with Setup menus on the LCD monitor/EVF screen. The Setup menus can also be displayed on an external monitor.

For connections of an external monitor, see “Connecting External Monitors” on page 109.

**Setup Menu Configuration**

The following menu icons are displayed when you press the MENU button, permitting you to select the corresponding menus.

- **CAMERA SET** menu
  For setting the items related to recording other than those on picture quality (page 97).
  The picture-quality items are set with the PICTURE PROFILE menu (page 71).

- **AUDIO SET** menu
  For setting the audio-related items (page 101).

- **VIDEO SET** menu
  For setting the items related to video outputs (page 102).

- **LCD/VF SET** menu
  For setting the items related to the displays on the LCD monitor/EVF (page 103).

- **TC/UB SET** menu
  For setting the items related to timecodes and user bits (page 105).

- **OTHERS** menu
  For setting the other items (page 105).

(continues)
This section covers basic operations for setting the Setup menu items.

**Menu controls**

- **MENU button**
  To turn Menu mode to use Setup menus on/off.

- **Joystick (SEL/SET button)**
  When you tilt it, the cursor moves in the corresponding direction, permitting you to select menu items or setting values.

- **Jog dial (SEL/SET dial)**
  When you turn the dial, the cursor moves up or down, permitting you to select menu items or setting values.

- **CANCEL button**
  To return to the previous layer of the menu. An uncompleted change is canceled.

**Displaying the Setup menu**

- **Press the MENU button.**

  The menu icons appear on the screen.

  The cursor is displayed on the icon of the menu used last, and the corresponding menu item selection area is displayed to the right.
Example: When the cursor is located at (CAMERA SET menu icon)

Menu icon

![Menu icon]

Menu item selection area

Note

When the camcorder is in EXPAND FOCUS mode (page 47), the Setup menus cannot be operated. Press the EXPAND FOCUS button to release the mode.

Setting the Setup menus

1 Rotate the jog dial or tilt the joystick back or forth to set the cursor to the icon of the menu you wish to set.

   The selectable menu items are displayed in the menu item selection area to the right of the icon.

2 Press the jog dial or the joystick.

   The cursor moves to the menu item selection area.

   You can also move the cursor to the menu item selection area by tilting the joystick to the right.

   • The menu item selection area can show 7 lines at maximum. When all the selectable items cannot be displayed at one time, you can scroll the display up or down by moving the cursor.

   A triangle appears at the upper or lower right corner of the menu item selection area to indicate that scrolling is enabled.

3 Turn the jog dial or tilt the joystick back or forth to set the cursor to the menu item you wish to set then press the dial or the joystick to proceed.

   The setting area appears to the right of the menu item selection area, and the cursor moves to the top of its subitems.

   ![Setting area]

   • The subitems and their current values are displayed.

   • To return to the previous layer, select “Return” or tilt the joystick to the left.

When you select an item that has no subitems and to be only On/Off or switched, the choices are displayed to the right of the item. In this case, proceed to step 5.
For the item that has subitems, turn the jog dial or tilt the joystick back or forth to set the cursor to the subitem you wish to set then press the dial or the joystick to proceed.

The available values of the selected subitems are displayed, and the cursor moves to the current value.

Select the desired value by turning the jog dial or tilting the joystick back or forth then press the dial or the joystick to make the setting.

The setting is changed, and the new setting is displayed.

When you select “Execute” for an execution item, the corresponding function is executed.

For an item that requires your confirmation
When you select an item that you must confirm before execution in step 3, the menu display temporarily disappears, and a confirmation message is displayed. Following the instructions of message, specify whether to execute or cancel.

Entering a character string
When you select an item for which a character string, such as a time value or filename, is to be specified, the input area for the character string is highlighted, and “SET” appears at the right end.

1 Select characters by turning the jog dial or tilting the joystick back and forth then press the dial or joystick to proceed.

The cursor moves to the next column. To return to the previous column, tilt the joystick to the left.

2 Perform setting in the same manner up to the last column/digit.

The cursor moves to “SET.”

3 Press the jog dial or the joystick. The setting is completed.

Terminating the menu operation
Press the MENU button.
The normal camera picture is resumed.
The functions and available settings of menus are listed below. The default settings set at the factory are shown in bold face (example: Speed).

|                     |                             |          |
|                     |                             | Note: The setting automatically returns to “Off” when the camcorder is turned off.  
| **Battery Alarm**   | Low BATT                    | Set the battery level at which the Low BATT warning is generated (in steps of 5%).  
|                     | 5% / 10% / 15% / ... / 45% / 50% |          |
|                     | BATT Empty                  | Set the battery level at which the BATT Empty warning is generated.  
|                     | 3% to 7% (3%)               |          |
|                     | DC Low Volt1                | Set the DC IN voltage at which the DC Low Volt1 warning is generated.  
|                     | 11.5 V to 17.0 V (11.5 V)   |          |
|                     | DC Low Volt2                | Set the DC IN voltage at which the DC Low Volt2 warning is generated.  
|                     | 11.0 V to 14.0 V (11.0 V)   |          |
| **Battery INFO**    | Type                        | The type (product name) is displayed.  
|                     | MFG Date                    | The date of manufacture is displayed.  
|                     | Charge Count                | The accumulated number of times of charge/discharge is displayed.  
|                     | Capacity                    | The estimated total capacity of full charge is displayed.  
|                     | Voltage                     | The current output voltage is displayed.  
|                     | Remaining                   | The current remaining level is displayed.  
| **Direct Menu**     | All / Part / Off            | All: All Direct menu operations are permitted.  
|                     |                             | Part: A part of Direct menu operations is permitted. The operation is limited depending on the GAIN, SHUTTER, or WHITE BAL switch setting.  
|                     |                             | Off: No Direct menu operation is permitted.  
| **i.LINK I/O**      | Enable / Disable            | Enable: To use the i.LINK connector  
|                     |                             | Disable: To not use the i.LINK connector  
|                     |                             | Note: When you set this item to “Enable,” no signal is fed out from the SDI OUT connector.  
|
### Trigger Mode
Setting whether to trigger recording start/stop for an external device connected to via the i.LINK connector

- **Internal** / Both / External
  - Internal: To activate recording start/stop operations only for an SxS memory card in a built-in slot.
  - Both: To activate recording start/stop operations both for an SxS memory card in a built-in slot and the external recording device connected via the i.LINK connector.
  - External: To activate recording start/stop operations only for the external recording device connected via the i.LINK connector.

### Country
Setting the area for use

- **NTSC Area** / PAL Area
  - Select the color system for the area where you will use the camcorder.
  - The default setting is different among the sales areas.
    - United States and Canada: NTSC
    - Other areas: PAL

### Video Format
Selecting the video format

- **Country: NTSC Area**
  - HQ 1080/60i
  - SP 1080/60i
  - HQ 1080/30P
  - SP 1080/24P
  - HQ 720/60P
  - HQ 720/30P
  - HQ 720/24P
- **Country: PAL Area**
  - HQ 1080/50i
  - SP 1080/50i
  - HQ 1080/25P
  - HQ 720/50P
  - HQ 720/25P
  - Select the video format (bit rate, picture size, frame rate, and scan system in combination).
    - **Bit rate**
      - HQ or SP
    - **Picture size**
      - 1080 or 720
    - **Frame rate**
      - 24, 25, 30, 50, or 60
    - **Scan system**
      - i (interlace) or P (progressive)
  - The default setting is different among the sales areas.
    - United States and Canada: HQ 1080/60i
    - Other areas: HQ 1080/50i

### Clip
Setting for clip name or deletion

- **Title Prefix**
  - **nnn**
    - (nnn=least three digits of the serial number)
  - Set the first 4-alphanumeric part of the clip names.
  - You can use upper- and lowercase alphabets, numerics 0 to 9, - (hyphen), and _ (underscore).
- **Number Reset**
  - Execute / Cancel
  - Select “Execute” to reset the second 4-numeric part of the clip name to 0001.
- **Last Clip DEL**
  - Execute / Cancel
  - Select “Execute” to delete the last recorded clip.
- **All Clips DEL**
  - Execute / Cancel
  - Select “Execute” to delete all clips on the active SxS memory card.
  - **Note**
    - Clips to which you applied OK mark cannot be deleted.

### Format Media
Formatting SxS memory cards

- **Media (A)**
  - Execute / Cancel
  - Select “Execute” to format the SxS memory card in slot A.
- **Media (B)**
  - Execute / Cancel
  - Select “Execute” to format the SxS memory card in slot B.
Connecting External Devices

Connecting External Monitors

To display recording/playback pictures on an external monitor, select the output signal and use an appropriate cable for the monitor to be connected.

- Regardless of whether the signal is HD or SD, the same status information and menus can be displayed on the external monitor as those on the LCD monitor/EVF screen.
- According to the signal fed to the monitor, set “YPbPr/SDI Out Display” or “Video Out Display” of the VIDEO SET menu (page 102) to “On.”

When outputting SD signals, select in advance the output mode (Squeeze, Letterbox, or Edge Crop) with “Down Converter” of the VIDEO SET menu.

**Note**

SD signals down-converted for output have the following restrictions:
Images of 50P/50i/25P are output as PAL signals, those of 59.94P/59.94i/29.97P are output as NTSC signals, and those of 23.98P are output as 2-3 pulled-down NTSC signals.

**SDI OUT connector (BNC)**

The connector is set at the factory to output an HD SDI signal.

Using “YPbPr/SDI Out Select” (page 102) of the VIDEO SET menu, you can change the setting so that it outputs an SD SDI signal. (The HD/SD switching becomes valid also on the COMPONENT OUT connector in synchronization.)

Use a commercially available 75-ohm coaxial cable for connection.

**To display the menus and status information on the connected monitor**

Set “YPbPr/SDI Out Display” (page 102) of the VIDEO SET menu to “On.”

**Note**

If input/output at the i.LINK (HDV) connector are enabled (page 113), no signal is fed out from the SDI OUT connector.

**COMPONENT OUT connector (mini-D connector)**

The connector is set at the factory to output HD analog component signals for monitoring.

Using “YPbPr/SDI Out Select” (page 102) of the VIDEO SET menu, you can change the setting so that it outputs down-converted analog component signals for monitoring. (The HD/SD switching becomes valid also on the SDI OUT connector in synchronization.)

Use the supplied component video cable for connection.
To display the menus and status information on the connected monitor
Set “YPbPr/SDI Out Display” (page 102) of the VIDEO SET menu to “On.”

A/V OUT connector (audio/video composite multiconnector)
When “YPbPr/SDI Out Select” (page 102) of the VIDEO SET menu is set to “Off,” the connector outputs 2-channel audio, down-converted SD analog composite, and YC separate signals, all for monitoring.
Use the supplied AV connection cable for connection.

To display the menus and status information on the connected monitor
Set “Video Out Display” (page 102) of the VIDEO SET menu to “On.”

Operating Clips With a Computer

The clips recorded on SxS memory cards with this camcorder can be controlled on a computer or edited using the optional nonlinear editing software.
For these purposes, the clips on an SxS memory card can be operated by directly loading the card in a computer or by connecting the camcorder or the optional SBAC-US10 SxS Memory Card USB Reader/Writer to the computer, using an USB cable as shown below.

Preparations

To use the ExpressCard slot of a computer
If the computer is equipped with an ExpressCard/34 or ExpressCard/54 slot, you can directly insert the SxS memory card containing clips recorded with this camcorder and access to the files.
For the operating requirements for the computer, see “Using the CD-ROM” on page 11.

Note
The SxS Device Driver Software on the CD-ROM supplied with the camcorder must be installed on your computer. Before installation, be sure to read the enclosed SxS Device Driver Software End-User License Agreement.
For information on installation of the driver, refer to the ReadMe on the supplied CD-ROM.
For support information for the driver, visit the following URL:
http://www.sony.net/SxS-Support/

With a Windows computer, check that a Removable Disk appears in My Computer. This indicates normal status.
With a Macintosh computer, an icon is displayed on the menu bar.
To connect with a USB cable
When you connect the camcorder or the SBAC-US10 SxS Memory Card USB Reader/Writer (optional) using the supplied USB cable, the memory card in the slot is acknowledged as an extended drive by the computer. When two memory cards are mounted in this camcorder, they are acknowledged as two independent extended drives by the computer.

Notes
- When connecting the USB cable to the computer, be careful to check the form and direction of the USB connector.
- The camcorder and the SBAC-US10 do not work on the bus power from the computer. Supply the operating power independently.

To check the connection to the camcorder
1. Turn the camcorder on by setting the power switch to CAMERA or MEDIA.

A message prompting you to confirm that you wish to enable the USB connection is displayed on the LCD monitor/EVF screen. This message will not be displayed while another confirmation message or in-progress message (e.g., for formatting or restoration of an SxS memory card) is shown on the screen. It appears when formatting or restoration is completed. The message is also not displayed while the CLIP INFO screen is shown on the screen. It appears when an operation on the CLIP INFO screen is completed or you return to the thumbnail screen.

2. Select “Execute” by operating the jog dial or the joystick.

The screen displays the following:

3. With Windows, check that the memory card is displayed as a removable disk in My Computer.
With Macintosh, check that a “NO NAME” or “Untitled” folder was created on the desktop.

This indicates that the connection is active. (The folder name on the desktop of the Macintosh computer can be changed as needed.)

The following operations must be eliminated when the access lamp is lit in red.
- Turning the power off or disconnecting the power cord
- Removing the SxS memory card
- Disconnecting the USB cable

When using the SBAC-US10, refer to the operating instructions of the SBAC-US10.

Removing an SxS memory card

Windows

1. Click on the icon of “ Safely Remove Hardware” on the task bar of the computer.
2. Select “ Safely remove SxS Memory Card - Drive(X: )” from the displayed menu.
3. Check that the Safe To Remove Hardware message appears then remove the card.
Macintosh
Drag the SxS memory card icon on the desktop to Trash.
If the SxS memory card icon is located on Finder, click on the eject icon on its side.

Note
Do not select “Card Power Off” from the SxS memory card icon displayed on the menu bar.

Using the XDCAM EX Clip Browsing Software
To copy clips to the local disk of a computer, the XDCAM EX Clip Browsing Software must be used.
Install the XDCAM EX Clip Browsing Software on the supplied CD-ROM to your computer.
Although the data regarding recorded materials are stored over multiple files and folders, you can easily handle the clips without considering such data and directory structure by using the XDCAM EX Clip Browsing Software.

Note
If you operate, e.g. copy the clips on the SxS memory card by using the Explorer (Windows) or Finder (Macintosh), the subsidiary data contained by the clips may not be maintained. To avoid such a problem, use the XDCAM EX Clip Browsing Software.

See page 12 for the operating requirements, and refer to the User’s Guide contained in the CD-ROM.

For support information on the XDCAM EX Clip Browsing Software, visit the web sites shown in “XDCAM EX web sites” on page 11 or on the cover page of the supplied CD-ROM.

Using a nonlinear editing system
For a nonlinear editing system, optional editing software that corresponds to the recording formats used with this camcorder is required.
Store the clips to be edited on the HDD of your computer in advance, using the supplied XDCAM EX Clip Browsing Software.
Some editing software may not operate properly. Be sure to confirm before use that it conforms to the recording formats used with this camcorder.

To use Final Cut Pro of Apple Computer, Inc.
It is necessary to convert the clips to files that can be edited with the Final Cut Pro, using XDCAM Transfer.

For information on XDCAM Transfer, visit the web sites shown in “XDCAM EX web sites” on page 11 or on the cover page of the supplied CD-ROM.
Connecting an External Device (i.LINK Connection)

When an HDV-compatible video format (SP 1080/60i, SP 1080/50i, or SP 1080/24P) is selected, you can record the same images as those recorded on the memory card in this camcorder on an external device connected to the i.LINK(HDV) connector, or record the playback picture of the external device on the memory card in the camcorder.

Nonlinear editing conforming to the HDV format is also enabled.

Notes
- When you set “i.LINK I/O” of the OTHERS menu to “Enable,” no signal is output from the SDI OUT connector.
- When a cable is connected to the i.LINK(HDV) connector during playback, the display returns to the thumbnail screen.
- Use the i.LINK(HDV) connector only for one-to-one i.LINK connection.

Recording the Camcorder Picture on an External Device

When you set the camcorder to Camera mode, the picture being shot with this camcorder is output as an HDV stream via the i.LINK(HDV) connector. It can be recorded on a connected HDV recorder in synchronization with the REC START/STOP operation on this camcorder.

1. Perform the preparatory settings of the camcorder.
   - Set the video format to SP 1080/60i, SP 1080/50i, or SP 1080/24P.
   - Set “i.LINK I/O” (page 107) of the OTHERS menu to “Enable.”
   - Set “Trigger Mode” (page 108) of the OTHERS menu to “Both” or “External.”
     - Both: To record both on the memory card in the camcorder and on the external device
     - External: To record only on the external device

2. Set the external device to recording standby status.
   For operations of the external device, refer to the operation manual of that device.

3. Set the camcorder to Camera mode by setting the power switch to CAMERA.

4. Press the REC START/STOP button.
   The external device starts recording in synchronization.

The status of the external device is displayed in the i.LINK status indication area (page 18) on the LCD monitor/EVF screen.

<table>
<thead>
<tr>
<th>Indication</th>
<th>Status of the external device</th>
</tr>
</thead>
<tbody>
<tr>
<td><em>STBY</em> <em>HDV</em></td>
<td>In HDV recording standby</td>
</tr>
<tr>
<td><em>REC</em> <em>HDV</em></td>
<td>In HDV recording</td>
</tr>
</tbody>
</table>

Notes
- Operation may be different depending on the type of external device.
- Although there is some time lag from which you press the REC START/STOP button until the i.LINK status indication changes, the same pictures are recorded on the memory card in this camcorder and the external device if “Trigger Mode” is set to “Both.”
- While you can record shot marks on the memory card during recording, they are not added to the pictures recorded on the external device.

Nonlinear Editing

You can transfer an HDV stream to a nonlinear editing system connected via the i.LINK(HDV) connector.

Notes
- The i.LINK(HDV) connector of this camcorder is a 4-pin connector. Check the number of pins of the i.LINK connector on your computer and use an appropriate i.LINK cable.
- In searching pictures of this camcorder on the computer, it may take some time until the display is reflected on the computer.
- If the playback clip is short or the playback starting point is near the end of the clip, the i.LINK signal may be interrupted between the clip and the next clip. When you try to capture...
such a signal using the nonlinear editing system, a malfunction may occur, depending on the nonlinear editing software in use.
• If you specify a search speed other than 4 or 15 times normal with the nonlinear editing system, no i.LINK signal is fed out. In such a case, the picture on the LCD monitor may stay frozen.
• High-speed playback picture may not be displayed on the computer screen, depending on the nonlinear editing software in use.

Setting on this camcorder
Set “i.LINK I/O” of the OTHERS menu to “Enable.”

For operations of the nonlinear editing software, refer to the operation manual of the software.

Recording External Input Signals

The HDV stream input from a device connected via the i.LINK connector can be recorded on an SxS memory card in this camcorder. The timecodes superimposed on the i.LINK input are recorded regardless of the settings of the camcorder.

1. Set the external signal to a format that can be recorded on the camcorder.
Signals of $1440 \times 1080/59.94i$ can be recorded when “Video Format” (page 108) is set to SP 1080/60i or SP1080/24P. Signals of $1440 \times 1080/50i$ can be recorded when set to SP 1080/50i.
Recording is not allowed with other combinations of “Video Format” and input signals.

2. Set “i.LINK I/O” (page 107) of the OTHERS menu to “Enable.”

3. Set the camcorder to Media mode.

4. Press the STOP button to set the camcorder to STOP mode.
The input image is displayed on the LCD monitor/EVF screen and the monitor connected via the COMPONENT OUT connector or A/V OUT connector. The audio signal is output from the built-in speaker (or headphones connected to the headphone jack) and the speaker of the monitor connected to the A/V OUT connector.

5. Press the REC START/STOP button on the handle.
Recording begins.

Notes
• The REC START/STOP button on the grip does not function.
• An error is generated in the following cases. In such a case, cancel Recording mode by pressing the REC START/STOP button.
  —The video format of input signal does not match that specified on the camcorder.
  —A copy-protected stream is being fed in.
• If the input to the camcorder becomes no signal during recording, the tally lamps and the i.LINK ●REC status indication on the LCD monitor/EVF screen flash, indicating that no signal is being recorded on the SxS memory card.
When an input signal is resumed, recording is restarted, incrementing the clip number on the memory card.
Use and Storage

**Do not subject the unit to severe shocks**
The internal mechanism may be damaged or the body warped.

**Do not cover the unit while operating**
Putting a cloth, for example, over the unit can cause excessive internal heat build-up.

**After use**
Always set the power switch to OFF.

**Before storing the unit for a long period**
Remove the battery pack.

**Shipping**
- Remove the memory cards before transporting the unit.
- If sending the unit by truck, ship, air or other transportation service, pack it in the shipping carton of the unit.

**Care of the unit**
Remove dust and dirt from the surfaces of the lens using a blower.
If the body of the unit is dirty, clean it with a soft, dry cloth. In extreme cases, use a cloth steeped in a little neutral detergent, then wipe dry. Do not use organic solvents such as alcohol or thinner, as these may cause discoloration or other damage to the finish of the unit.

To remove dust from inside the viewfinder remove the viewfinder by sliding it while holding the viewfinder release lever downward.

**In the event of operating problems**
If you should experience problems with the unit, contact your Sony dealer.

**Use and storage locations**
Store in a level, ventilated place. Avoid using or storing the unit in the following places:
- In excessive heat or cold (operating temperature range: 0°C to 40°C or 32°F to 104°F)
  Remember that in summer in warm climates the temperature inside a car with the windows closed can easily exceed 50°C (122°F).
- In damp or dusty locations
- Locations where the unit may be exposed to rain
- Locations subject to violent vibration
- Near strong magnetic fields
- Close to radio or TV transmitters producing strong electromagnetic fields.
- In direct sunlight or close to heaters for extended periods

**To prevent electromagnetic interference from portable communications devices**
The use of portable telephones and other communications devices near this unit can result in malfunctions and interference with audio and video signals.

It is recommended that the portable communications devices near this unit be powered off.

**About the LCD panels**
The LCD panels are manufactured with extremely high-precision technology that yields effective pixel rates of 99.99% or higher.
However, very rarely, one or more pixels may be permanently dark or permanently lit in white, red, blue, or green.
This phenomenon is not a malfunctions. Such pixels have no effect on the recorded data, and the unit may be used with confidence even if they are present.
Phenomena specific to CMOS image sensors

The following phenomena that may appear in images are specific to CMOS (Complementary Metal Oxide Semiconductor) image sensors. They do not indicate malfunctions.

**White flecks**
Although the CMOS image sensors are produced with high-precision technologies, fine white flecks may be generated on the screen in rare cases, caused by cosmic rays, etc. This is related to the principle of CMOS image sensors and is not a malfunction.

The white flecks especially tend to be seen in the following cases:
- when operating at a high environmental temperature
- when you have raised the master gain (sensitivity)
- when operating in Slow-Shutter mode

**Aliasing**
When fine patterns, stripes, or lines are shot, they may appear jagged or flicker.

**Flicker**
If recording is made under lighting produced by discharge tubes, such as fluorescent, sodium, or mercury-vapor lamps, the screen may flicker, colors may vary, or horizontal stripes may appear distorted. In such cases, turn the Flicker-Reduction function on (see page 50). In some cases, such phenomena may not be improved with the Flicker-Reduction function.

It is recommend to set the electronic shutter speed to \(\frac{1}{100}\) sec. in 50-Hz areas and to \(\frac{1}{60}\) in 60-Hz areas.

**Focal plane**
Owing to the characteristics of the pickup elements (CMOS sensors) for reading video signals, subjects that quickly move across the screen may appear slightly skewed.

---

**Formats and Limitations of Outputs**

### Video Formats and Output Formats

The format of output signals from the COMPONENT OUT connector and the SDI OUT connector varies according to the recording/playback video formats and the kind of the output signal (the setting of “YPbPr/SDI Out Select” of the VIDEO SET menu).

**Output formats in E-E mode\(^1\)/recording mode (Camera mode)**

Analog component signals from the COMPONENT OUT connector are output in the format shown below according to the “Video Format” setting of the OTHERS menu and the “YPbPr/SDI Out Select” setting (HD or SD) of the VIDEO SET menu.

The SDI OUT connector outputs serial digital signals of the same format converted from the analog component signals fed from the COMPONENT OUT connector.

\(^1\)E-E mode: Recording standby status

**Note**

No signal is output from the A/V OUT connector when “YPbPr/SDI Out Select” of the VIDEO SET menu is set to “HD” or “SD.”

### Output formats in clip playback mode (Media mode)

Analog component signals from the COMPONENT OUT connector are output in the format shown below according to the video format of the playback clip and the “YPbPr/SDI Out Select” setting (HD or SD) of the VIDEO SET menu.

The SDI OUT connector outputs serial digital signals of the same format converted from the analog component signals fed from the COMPONENT OUT connector.

**Note**

No signal is output from the A/V OUT connector when “YPbPr/SDI Out Select” of the VIDEO SET menu is set to “HD” or “SD.”

### When the frame rate setting of the video format is 59.94i/29.97P/23.98P

<tr>
<td>720/25P</td>
<td>720/50P</td>
</tr>
</tbody>
</table>

1/No signal is fed from the SDI OUT connector.

2/The actual frame rate of the output signal is 1/1.001 of the value shown in the table. Some frame may be deleted when converting the frame rate.

### Limitations of Outputs

The outputs from the camcorder are limited by the VIDEO SET menu settings as follows. These limitations are common to Camera mode and Media mode.
Backup Battery

This camcorder uses a backup battery to retain various setting data.
A lithium battery (CR2032) for backup is mounted in the camcorder at the factory.
The backup battery retains the date, time, and timecode in Free Run mode even when no operating power is being supplied.

Service life of the backup battery

When the backup battery’s voltage falls, the backup battery low-voltage warning appears on the LCD monitor/viewfinder screen.
If this warning appears, replace the battery as soon as possible.

WARNING
Battery may explode if mistreated.
Do not recharge, disassemble, or dispose of in fire.

CAUTION
• Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer.
• Dispose of used batteries according to the manufacturer’s instructions.

Replacing the backup battery

Notes
• Be sure to set the power switch to OFF when replacing the backup battery.
• Be careful not to drop the removed screw into the camcorder.

1 Open the cover of the backup battery holder on the bottom by loosening the screw, and remove the battery.

2 Insert a new backup battery (CR2032) with the + symbol on the battery facing outside.

3 Attach the cover in the original position.
## Troubleshooting

### Operating Power

## External Devices

<table>
<thead>
<tr>
<th>Symptoms</th>
<th>Cause</th>
<th>Remedy</th>
</tr>
</thead>
</table>
| The equipment connected to the camcorder via an i.LINK connection does not react as expected, for example, no picture appears on its screen. | It sometimes takes time for the connected equipment to recognize the operation. | Wait for about 15 seconds. If the connected equipment still does not react, do the following:  
  - Check the i.LINK cable, for example, by re-plugging it.  
  - Turn the power off, and connect the cable again.  
  - Change the i.LINK cable. |
The camcorder informs you of situations where warning, caution, or an operation check is required, through messages on the LCD monitor/EVF screen, the tally lamps, and a buzzer.

The buzzer is output to the built-in speaker or to the headphones connected via the headphone connector. The buzzer volume can be adjusted with “Alarm Level” in “Audio Output” of the AUDIO SET menu.

### Error Indications

The camcorder stops operation after the following indications.

<table>
<thead>
<tr>
<th>Error indication on LCD/EVF</th>
<th>Buzzer</th>
<th>Tally lamps</th>
<th>Cause and measures</th>

About i.LINK

This section explains the specifications and features of i.LINK.

What is i.LINK?

i.LINK is a digital serial interface designed to integrate devices equipped with i.LINK connectors. i.LINK allows your device to:

- Perform two-way transmission and reception of data such as digital audio and digital video signals.
- Control other i.LINK devices.
- Easily connect multiple devices with a single i.LINK cable.

Your i.LINK device is capable of connecting to a wide range of digital AV devices for data transfer and other operations.

Other advantages include the following feature. When connected to multiple i.LINK devices, your i.LINK device can perform data transfer and other operations not only with the directly connected devices but also with any of the devices that are connected to those devices. Therefore, you do not need to be concerned with device connection order. However, depending on the features and specifications of the connected devices, you may need to use certain functions differently, and you may not be able to transfer data or perform certain operations.

i.LINK, a nickname for IEEE 1394 proposed by Sony, is a trademark supported by many companies worldwide.

IEEE 1394 is an international standard defined by IEEE, the Institute of Electrical and Electronics Engineers, Inc.

Note

The camcorder can be connected to one device with the i.LINK cable (DV cable). When you connect with a device that has two or more i.LINK connectors, refer to the operating instructions supplied with the connected device.

About data transfer speed of i.LINK

i.LINK defines a maximum data transfer speed of approximately 100, 200 and 400 Mbps1) that are described as S100, S200 and S400 respectively. For i.LINK devices, a maximum data transfer speed that the device supports is identified on “Specifications” page of the operating instructions supplied with the device or near its i.LINK connector.

1) When connecting with the device that support different data transfer speed, the actual data transfer speed may be different from those described on the i.LINK connectors.

What is Mbps?

Mega bits per second. A measure of the rate at which data is transmitted per second. In case of 100 Mbps, 100 Mega bits of data can be transmitted per second.

i.LINK operation with your camcorder

For details on operation when other equipment with i.LINK (HDV) connector is connected, see page 113.

For details on connection with i.LINK cable and necessary software, refer to the operating instructions supplied with the connected device.

About the required i.LINK cable

Use the Sony 6-pin-to-4-pin or 4-pin-to-4-pin i.LINK cable (for HDV dubbing) to connect the i.LINK devices.

i.LINK and are trademarks.
**Specifications**

**General**

**Power requirements**
DC 12 V

**Power consumption**
Approx. 12 W (Typical) (Recording, EVF On, LCD monitor Off)

**Peak inrush current**
(1) Power ON, current probe method:
15 A (240V)
(2) Hot switching inrush current, measured in accordance with European standard EN55103-1:
62 A (230V)

**Operating temperature**
0°C to +40°C (32°F to 104°F)

**Storage temperature**
–20°C to +60°C (–4°F to 140°F)

**Recording/playback formats**

**Video**
- HQ mode: MPEG-2 MP@HL,
  35 Mbps / VBR
  1920 × 1080/59.94i, 50i, 29.97P, 25P, 23.98P
- SP mode: MPEG-2 MP@H-14,
  25 Mbps / CBR
  1440 × 1080 / 59.94i, 50i
  (23.98P is converted to 59.94i in 2-3 pull-down processing.)

**Audio**
LPCM (16 bits, 48 kHz, 2 channels)

**Recording/playback time**
- With one SBP-8
  SP mode: Approx. 35 min.
  HQ mode: Approx. 25 min.
- With one SBP-16
  SP mode: Approx. 70 min.
  HQ mode: Approx. 50 min.

**Continuous operation time**
- (Recording, EVF On, LCD monitor Off)
  With the BP-U60
  Approx. 4 hours
  With the BP-U30
  Approx. 2 hours

**Mass**
Camcorder: 2.4 kg (5 lb 5 oz)
With the supplied lens hood, eyecup, BP-U30 battery pack and one SxS memory card: 2.8 kg (6 lb 3 oz)

**Dimensions**
See page 126.

**Supplied accessories**
See page 8.

**Camera Block**

**Lens**

**Focal length**
5.8 mm to 81.2 mm
(equivalent to 31.4 mm to 439 mm on 35 mm lens)

**Zoom**
Servo/Manual selectable

**Zoom ratio**
14×

**Maximum relative aperture**
1:1.9

**Iris**
Auto/Manual selectable
F1.9 to F16 and C (close)

**Focus**
Auto/Manual selectable
Ranges:
800 mm to ∞ (Macro OFF)
50 mm to ∞ (Macro ON, Wide)
735 mm to ∞ (Macro ON, Tele)

**Picture stabilizing function**
SteadyShot ON/OFF possible, shift-lens system
Specifications

Filter thread
M77 mm, pitch 0.75 mm

Micro
ON/OFF switchable

Camera

Pickup device
1/2-inch type, CMOS image sensor
Effective picture elements:
